

Garia Golf Car

The golf carts that you see all the time at golf courses are plain boring. And golf enthusiasts have to travel across the entire course on those boring vehicles. Mercedes decided to collaborate with Garia to build a luxury golf car because why not? Your journey to the next hole in the golf course is sure to be a head turner when

this stylish golf car drives by. The LED lamps on the front look impressive while the carbon fibre roof cuts out the unnecessary weight. At the back, you'll have the regular storage area for your golf equipment and to break the luxury threshold, it has a refrigerator there as well. The dashboard

of the car has 10.1-inch touchscreen display acting as a command center. You'll be able to cycle between different modes of the car and also enter your scores in the in-built electronic score card. Let's click those imaginary champagne glasses together!

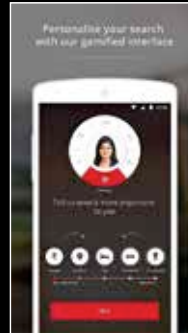

Sky Ya

Everyone is getting serious about building eco-friendly transport vehicles and although we have electric cars and bikes, why not extend that to luxury yachts? Well, maybe not completely but the Sky Ya is a 47-meter hybrid yacht that is capable of capturing solar energy to power its engines when the sun is generous. It doesn't just stop there and goes on to accommodate an entire garden onboard. We aren't sure what utility would a garden serve in the middle of the ocean but we would like to go with the owner's inclination towards gardening. Most of the surface of the yacht will be covered with solar panels in order to absorb maximum sunlight to be able to give it a top speed of 18 knots. For the interiors, it has a capacity of 10 with three guest cabins and a master suite, along with the main-deck consisting of an open dining area and lounge. The last dash of luxury on the Sky Ya is a helipad.

APP WATCH

Property Search by HDFC RED

This app looks like an one that can change the evident lack of innovation in the online property search market. The app begins with knowing your preferences with a unique interface allowing you to slide markers to indicate their importance, with factors like location, budget, possession and more. After that, the app shows you property listing ordered by the percentage of match with your preferences. In the results, you can

swipe down and move to the next listing, not too different compared to the now popular tinder-esque design. Give this a shot if you're in the market for a new house.

Nike+ Training Club

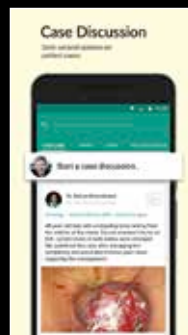

This one aims to bring your health back on track, and how can that not "work out", right? Horrible puns aside, Nike+ Training Club had initially started as a women's only app. Subsequently, with high demand, a gender neutral update was rolled out. Along with designing customized workouts for you, based on equipment available, time available, desired goals etc, the app also allows you to share your results with other friends on the

app. Each of the workout demonstrates every exercise involved, and the adaptable schedule allows you to make changes as well. You can also choose specific workouts manually. Now there's really no reason to not stay fit, right?

Curofy

Your doctor is the one other person responsible for your health apart from you. And in this age of connectivity, Curofy aims to be the perfect social platform for doctors to put together their collective expertise. With over 85,000 doctors on the platform from many specialisations, they also have tie-ups with medical associations like FOGSI, API, ASI, IDA etc to conduct live coverage of their conferences. The Discuss tab allows doctors to discuss

their cases, and the app also allows doctors and medical students to look for jobs and career advice. Understandably, it only allows doctors and medical students on the platform, by verifying registration numbers and IDs.
