Aquaphobia!

Don't deprive your gadgets of their share of the monsoon

Arnab Mukherjee

The rain gods have showered us with their grace in most parts of our country by now, and by chance if you live somewhere that's still running dry, this article will hopefully be useful to you too pretty soon. After the sweltering heat we had in the summers this year, all of us are more than happy with the ample downpour that has been happening. You know who isn't happy? Your gadgets. Electronics and water aren't exactly on good terms and barely manage to coexist if you're lucky. And if you aren't, then you're in for a big hole in your pocket. Unless you've prepared your gadgets with the tips that we have compiled for you.

Smartphone

A quick and easy fix to protect your phone from the moisture is to put it in a ziploc bag filled with rice whenever you're taking it out in the rain or highly humid situations. But if this is too much jugaad for you, you should check the IP rating of the smartphone you have. It usually follows the pattern "IP mn"

Don't gasp the next time your phone enjoys the rain!

where m is the rating for dust protection and n is the rating for waterproofing. The n needs to be atleast 7 for you to be confident that your phone can take a brief shower with you. Some of the phones that satisfy that are the Samsung Galaxy S7 and S7 Edge, Sony Xperia M4 Aqua and quite a number of Chinese manufacturers. If you're an iPhone user, especially from the 6 or 6s range, you'll have plenty of good waterproof case options. For others, we advise you to look for materials like Gore Tex which are certified waterproof.

Smartwatch/Fitness band

What good is a fitness band or smartwatch in the monsoon if you have to immediately pack it up when the rains start? This category of devices has the highest need for waterproofing. While
