CARDIAC DESIGN LABS

Winner of Google's Grand Jury prize at the Startup India Launchpad, Bengaluru-based Cardiac Design Labs is a healthcare tech startup, on its way to great glory. The startup aims at solving one of the most crucial health

problems, not only in India, but also the world. Their flagship device, a Mobile Intelligent Remote Cardiac Monitor or MIRCaM, is an affordable cardiac monitoring system that comprises of a body unit, patient's bedside unit, doctor's terminal and doctor's mobile app. The MIRCaM is capable of providing real-time patient alerts in the form of mobile notifications to doctors and hospitals. It's portable and is best for post-operative monitoring at home. Cardiac Design Labs

was founded by Anand Madanagopal, a graduate from BITS-Pilani, who formerly worked with Tata Elxsi. MIRCaM is Madanagopal's brainchild, as he looks to make cardiac care more affordable and accessible in India.

BIOMATQUES

Biomatiques Identification Solutions recently made the cut for Government of India's ₹10,000-crore 'fund of funds' for Indian startups. Biomatiques bagged the number 3 spot in the list of 88 startups benefiting from the enormous fund. Their forte – Iris Recognition Technology. Established in 2012, the startup brought in the wave of iris recognition tech to India.

Biomantiques' India made iris scanners were widely used during Aadhar card registrations. They are also the only company to receive the Standardization, Testing & Quality Certification (STQC) from the Department of Electronics & Technology (DeitY). Housed in Surat, Gujarat, Biomatiques has a range of iris recognition devices under its belt. The startup has had a turnover of ₹10 Crore till date, with more government tie-ups in the pipeline.

BECK

Marrying technology and logistics, BECK Technology Ventures is a startup looking to disrupt the global logistics market by helping its users send anything anywhere economi-
