

10 things in tech

THAT JUST WOULDN'T BE THE SAME WITHOUT INDIANS

**Desi blood has contributed more to modern day science
and technology than we often acknowledge**

BY ARNAB MUKHERJEE

arnab@digit.in

Whenever we talk about India's contributions to the world, the discussion is inevitably domi-

nated by advances from ancient India in various fields. Unbeknownst to most of the world, there are numerous things in the 21st century technology that India should be thanked for. In fact, some of the things that Indians have given the world of technology even show potential to change it in the future. While the rumors that Indians comprise more than 30% of scientists at NASA might be false, we are at a point where NASA is approaching ISRO for satellite launches. So if you thought that India is just a country for back-office services and outsourcing, get ready to get that opinion changed.

USB, PCIE AGP

Probably one of the best known names on the list, Ajay Bhatt from Intel is a computer architect who is credited with the creation of Universal Serial Bus (USB), PCI Express and Accelerated Graphics Port (AGP). So basically, your computer, your graphics cards and almost every gadget that can connect to another gadget would have been really different without him. Intel highlighted his achievements in a TV advertisement in 2009, where he was portrayed by another actor.

Intel's very own rockstar, Ajay Bhatt

Mr. Bhatt holds 31 patents already and several others are in stages of filing. He completed his graduation at the Maharaja Sayajirao University of Baroda, India.

FIBER OPTICS

Known as the father of fiber optics, there is a reason Narinder Singh Kapany is placed right below Ajay Bhatt. If Mr. Bhatt is one of the most well known ones on this list, Mr. Kapany is the one who is least known compared to the fame that his creation has received. He even coined the term "fiber optics" and was featured by Fortune magazine as one of the unsung heroes on a list of seven.

Even though people were trying to demonstrate total internal reflection since the 1800's, it was in the 1950s that Nar-

Mr. Narinder Singh Kapany (middle)

inder Kapany along with British Physicist Harold Hopkins combined thousands of glass fibers to make a light pipe and managed to send a picture through it.

With over 100 patents to his name, Narinder Kapany's career has been spread out beyond science over a number of areas like entrepreneurship, management, academia, publishing and even farming. He is also an artist and has created numerous sculpture which have been displayed in public exhibitions.

RADIO

While many would still consider this a subject of dispute, it is now public knowledge that Sir Jagadish Chandra Bose made the vast advancements in wireless communication that were necessary for modern day radio. The receiver
