

HOW 1980S BRITAIN LEARNED TO LOVE THE COMPUTER

The history of computing is a familiar topic in the US and in Silicon Valley. Here's the history of computing in the UK and how the old 1980s Britain fell in love with the computer in a talk with Tom Lean. <http://dgit.in/UKLove>

BEHIND THE SCENES

After waiting for months, Mr Robot's second season is finally out and being talked about all over the Internet. Of course all credit for its success goes to the various decisions taken by the creators, making sure the reins of the show always stayed in their hands. <http://dgit.in/MrRoboS2>

LOOKS DO MATTER

In the era of responsive and material web page designs, take a trip down nostalgia lane admiring how web pages used to look in their early days and how they have transformed now. Ever thought designing could make such great difference? <http://dgit.in/OldWbpg>

GO ALL IN ON SOCIAL MEDIA WEBSITES

Social media has spared no person and no business. If you thought you wouldn't need social media marketing skills, here is a guide on how departments that aren't into mainstream marketing can use social media creativity. <http://dgit.in/SMFrAll>

Seven tech advertisement fails in recent times

We've laughed at them, been outraged them, and we've let some of them pass. Here's to some of the more memorable ones.

– By Souvik Das

Advertising, as they say, is a tricky affair. Your ingenious idea to make a brand stand out among the crowd can go vehemently wrong in marginally misconstrued narratives, leading up to all the wrong headlines. Often, the intent is nowhere near what the ads eventually end up portraying. Such is what almost happened with Huawei, very recently.

In a bid to show off the Huawei P9's competence of imaging, the company posted a photograph on its Google+ page, with a caption that all but affirmed that the attached image was shot by the Huawei P9's camera. Android Police, though, had other ideas. Tracing the EXIF data of the photograph, Android Police discovered that the photograph was actually shot by a Canon EOS 5D Mark III DSLR camera, priced at over Rs. 2,00,000, and an EF 70-200mm f/2.8L IS II USM lens priced at almost Rs. 1,50,000. The net worth of the equipment is presumably almost 10 times the price of the Huawei P9, which is due to launch in India soon.

Huawei has since issued an apology for not clearly stating that the photograph was not shot by the P9, and was actually an indicative illustration of what you can expect from the smartphone. While this instance should not impact how the Huawei P9 fares ultimately, it is certainly enough to get people talking, and one that reminds

us of advertisements in the realm of technology and services that went wrong.

The first one that comes to mind is Nokia's PureView ad back in 2012. The advertisement was supposed to illustrate how powerful the PureView's camera was, and exhibit the Optical Image Stabilisation abilities. While the advertisement itself was quite pleasant, further inspection

Photo details

Date taken	3/8/16, 5:35 PM
Dimensions	2000 x 1333
File name	0107 - Huawei - Facebook - Google+ - Instagram - Twitter.jpg
File size	1.75M
Camera	Canon EOS 5D Mark III
Lens	EF70-200mm f/2.8L IS II USM
Focal Length	135mm
Exposure	1/800
F Number	f/4
ISO	500
Camera make	Canon

revealed that it may not have been shot with the PureView smartphone, but a proper arrangement of lights and a professional video camera. Nokia claimed that it had no intention of misleading its audience and the purpose of the ad was to show how OIS impacts smartphone imaging, but...

The third company in line after Huawei and Nokia is Amazon, one of the world's

most prominent brands. The e-commerce giant itself presents the opportunity for various brands to promote advertisements on their platform, but quite often, even the best make sudden, unexpected mistakes. Late last year, Amazon decided to promote an alternate history series, The Man in the High Castle, by painting marginally modified flags of Nazi Germany's Coat of Arms

and Imperial Japan's Rising Sun on New York's subway. Needless to say, the entire campaign was not received well, and eventually led to Amazon pulling off the campaign prematurely.

Tinder is yet another controversial entrant in the world of advertising and technology. After a story elaborating the murkier side of affairs in online dating was
