

Don't blame us if you're stuck in limbo!

The Jigsaw puzzle mode!

Jigsaw Puzzle Game

- Tools > Effects and Filters
- Video Effects > Geometry > Enable Puzzle Game
- Select number of Columns and rows on screen.

Play Video As ASCII Characters

- Open VLC Player
- Navigate to Tools > Preferences

Playing a video as ASCII characters sure makes it funnier

- Click on Video from left sidebar
- At Output field, choose Color ASCII Art Video Output

ELDER FRIENDLY SMARTPHONE TIPS

Making Text Bigger And Bolder

You must have seen at least one elderly person squinting their eyes at tiny text on a newspaper or the TV. The same readability issue carries over to smart-

phones for them. One of the primary reason elderly people are not fond of smartphones is due to the small font size and their reduced font weight. But what if I say, there is a way to make your smartphones ready for them? You can increase the font size and even make it bold, making them more comfortable with the updated smartphones and technology.

iOS

- Navigate to Settings > General > Accessibility.
- Tap on Bold Text to make your text bolder.
- Tap on Larger Text > Move the slider to adjust the font size.

Android

- Navigate to Settings > Display > Font size.
- Choose between Small, Normal, Large or Huge.

Finding The Perfect Keyboard

Even if the elderly can manage to read text on a smartphone screen, with or without the tips in the previous point, there is another pain point for them on smartphones. QWERTY keyboards are a big problem to use especially because of the small key sizes as well a possible unfamiliarity with the keyboard layout in general. Even some young people falter on QWERTY. There are a number of alternative keyboards out there for smartphones and you can choose one that suits their preferences on their phone.

iOS

- You can add a new keyboard on iOS like you get a new app from the app store. Once you have installed it, you will need to add it as a Keyboard.
- Go to Settings > General > Keyboard > Keyboards > Add a New Keyboard

Set the system font size in Android

and select the one from the Third-party keyboards list

Android

- There are handful of third-party keyboards available on the Google Play Store. We would suggest the "Simple Large Button Keyboard", as it provides you with the option to switch between QWERTY and ABC keyboard. Once you have downloaded it, go to Settings -> Language and Input -> Current Keyboard and choose the one you just installed.

Zooming in for Bigger Text

The readability issues on smartphones for the elderly don't end with the text. Sometimes, the content itself has details that they find a bit troublesome to perceive unaided. So help them with this issue, you can use the Zoom option available on smartphones, which allows you to magnify a part of the screen, enlarging it within the screen real estate available. This works on most smartphones and can actually help everyone who needs content to be bigger.

iOS

- Go to Settings > General > Accessibility.
