

Steps to choose Keyboards on iOS

- Hit the Zoom Button.
- Instructions: Using three fingers double tap on the screen to zoom in and out.

Android

- Navigate to Settings > Accessibility.
- Under the System Tab, Click on Magnification gestures > Select on
- Instructions: You can pinch-zoom or double tap with three fingers.

Add button shapes

The variety available in present day smartphone technology brings about the unavoidable problem of over-complicated interface elements. If the elderly people you know have asked you "How do I go back from this menu, where is the button?" then you know what we are talking about here. This tip will help your grandparents locate those keys and get comfortable with the UI.

iOS

- Go to Settings > General > Accessibility.
- Turn on Button Shape

Android

- On TouchWiz, Navigate to Settings > Accessibility > Vision.
- Click on Show button shape.

Enabling Subtitles and Captioning

When even we need subtitles at times for certain content, it is no surprise that the elderly, who are plagued by hearing problems, would find them helpful. Especially if their usual workaround to this is increasing the volume to the maximum irrespective of where they are. Although, be warned that this does not work with all apps and mostly works within the implementation of Android VideoView.

iOS

- Navigate to Settings > General > Accessibility

Steps to enable Button Shapes on iOS

- Turn on Subtitles & Captioning

Android

- Go to Settings > Accessibility > Captions and toggle it on

Read it aloud

Statistically, most people experience visual impairment to an extent after

Captions menu in Android

the age of 40. Think about it, don't the elderly you know ask you to read out something to them from a newspaper or a letter at times? With smartphones coming with the option of text-to-speech, this is possible now without your intervention as well, at least for the smartphones themselves.

iOS

- Navigate to Settings > General > Accessibility > VoiceOver

Android

- Go to Settings > Accessibility > Text-to-Speech and enable it.

Get enhanced alerts

Sometimes most of us miss calls or important alerts, even if our phone is kept on vibration mode. If setting the volume to high on ringtones or alerts is not an option, then enabling LED-flash alerts can be a very good trick, giving out LED flashes with
