Circle Gaming CC 840

Falls short on quality while keeping it cool

Previously we had reviewed a slighter entry-level CC 830. Compared to the CC 840 where the only differences were the size of the case, fans included by default and the number of drive bays. It borrows the rest of the features from the 830, the hot-swappable drive being the most interesting one. The slots have rubberised holders to prevent vibrations. They aren't tool-less, so if you're installing an HDD or SSD, you will have to screw them to the drive bay slots. Due to the massive dimension of the mid-tower case, the CC 840 will be able to accom-

modate the longest GPUs out there in the market (up to 450 mm in length).

It ships with five 120mm fans and you can add another fan on the bottom if you'd like to have more airflow inside. One thing to note is that the stock fans shipped aren't of good quality (same with the previous cabinet) and in this one, the top fans were wobbling on its axis which clearly reflects bad airflow and life. The front panel was difficult to remove and they should have gone for a different clip mechanism. Again, the glossy plastic body easily picks up marks while handling the cabinet.

It does a decent job by keeping the thermals at acceptable levels. On load, the CPU didn't cross the 60 degree mark on our Prime95 torture test while the GPU hit 61 degrees in our FurMark preset benchmark test. However, the price seems a little high. For ₹6k you do have better build quality such as the GX505 from Antec or the entry-level Carbide cabinets from Corsair.

Evidson AudioSport W6

Activity headphones on a budget that sound quite decent

The Evidson AudioSport W6 is a sports oriented, high-impact activity focused in-ear headphone. Naturally, it's expected that such headphones have a certain build quality and at the same time deliver a good fit. In those respects, the W6 does not disappoint. The size and shape of the housing makes for a perfect seal and the loop that goes over the ear provides additional support. The cable only has a single button clicker as opposed to a three-button volume +/- that most IEMs feature at this price point.

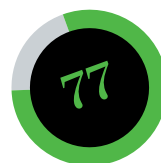

The W6 comes with five sets of silicone eartips in various sizes including bi-flange and tri-flange ones. The box mentions a storage pouch but I couldn't find one. To be

fair though, since the Evidson is priced a good ₹400 lower than the XF-200, it would be too much to expect a carrying case of the quality that Brainwavz offers.

Now for what really matters: the performance. The W6's sound signature is surprisingly well balanced unlike the overtly bassy IEMs that make up the bulk of the offerings at this price point. The entire frequency range is well represented but I wish there was a little more detail in the upper ranges. The bass will be adequate for most listeners but some "bass-heads" might find it lacking in that department. Overall for the asking price (currently sub-₹1k on Amazon) they are a worthy purchase for anyone looking for good quality audio at a low price point, not just for sports usage but even your regular day-to-day scenarios. I would not only recommend them over the Brainwavz XF-200 but also go so far as to recommend them over the Audio-Technica ATH-CKS550iS, if only for the value.
