Brainwavz XFit XF-200

A distinctly odd sound signature

Sports-oriented IEMs from brands like Audio-Technica (ATH-CKX9iS) or Sennheiser (OCX 685i) have traditionally always commanded a premium price for their offerings. In reality though what separates a regular old in-ear headphone from a “sports” oriented one is simply the build quality and a mechanism that makes for a more secure fit. While some of these additions may indeed justify a raised price point, they still don’t justify as significant a jump as most premium brands are asking for. There are, however, a couple of brands that are aiming to buck the trend. The two very similar offerings under review this month – the Brainwavz XF-200 and the Evidson W6

Price
₹1,699

– are proof that decent activity oriented IEMs can be built for a more humble price point.

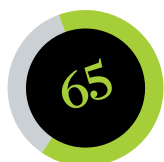

Available in both frosted white and black colour options, the Brainwavz Xfit XF-200 looks fairly nice. The white one had a transparent housing (showing the inner circuitry) reminiscent of the pro in-ears on-stage musicians use. The three button remote works fine with iPhone as well as Android. It even comes with the familiar high-quality Brainwavz hardcase as well as a barrage of different sized tips.

What about performance?

The sound signature is unlike other Brainwavz IEMs I’ve tested so far. The XF-200 is very shrill, perhaps even more than the Klipsch S4i which I’ve long regarded as the benchmark for treble enhanced headphones. The vocals sound recessed and the bass is overly subdued. You get fairly decent detail in the upper ranges but without the fullness of the mid and lower mid frequencies the audio isn’t wholesome or enjoyable.

If you are a bass head you should look elsewhere. Thankfully you won’t have to look far because the Evidson W6 is a good substitute.

Oppo F1 Plus

Good isn't good enough

The Oppo F1 Plus looks and feels like an iPhone, but it’s still design done right. With a full metal back and 2.5D curved glass on the front, and 6.6 mm thinness, it feels really premium. While 145 grams isn’t really light, it’s enough for the phone to feel ergonomic. Oppo has kept the design sleek and made one of the most ergonomic smartphones for the price.

The 5.5-inch 1080p AMOLED display complements the design. It’s vibrant, with distinctly AMOLED-like colour saturation, though not as oversaturated. The display can reach a peak brightness of 735 lux, which is a bit lower than ideal, but the colours make up for it. The diamond pentile arrangement of pixels allows uniform arrangement

Price
₹26,990

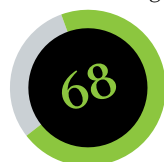

of colours, and Oppo has added a bit of extra punch to them artificially.

On the performance front, the Helio P10 on the F1 Plus does better than on phones like the Yu Unicorn and Meizu M3 Note, but it’s noticeably slower than phones like the OnePlus 3 and LeEco Le 2. Games like Asphalt 8 show considerable lags, and even app load times are higher than ideal.

While battery life is satisfactory, aided by VOOC fast charging, the camera is average. The 16 MP front camera softens images too much, and the 13 MP rear camera has good dynamic range, but is low on details.

Overall, the Oppo F1 Plus is a good phone, but not good enough to be recommended. It fails in its own USP, the front camera, and the performance isn’t good enough to spend over ₹5k on this.
