Mr. Bean's death hoax

Dear Internet, Rowan Atkinson is definitely not dead! Check out the story. digit.in/DeathhoaxMrBean

Cooler Master MasterCase Maker 5

A new king in modularity for cabinets

Price
₹18,500

Performance.....	75
Features	82
Build	83
Value	69

Specifications

Motherboard form factor:

ATX, Micro-ATX and Mini-ITX;

PSU form factor:

ATX standard (max. Length 200mm); **Front I/O:** 2 x USB 2.0, 1 x USB 3.0, 1 x USB 3.0 (Type C), Mic in and Audio Out, Fan and LED strip control; **Drive options:** 2 x 5.25-inch, 5 x 3.5-inch HDD/2.5-inch SSD, 2 x 2.5-inch SSD; **Fans:** 3 x 140mm (2 x front, 1 x rear)

Since the first MasterCase, Cooler Master has been incrementally updating their FreeForm Modular System by expanding the degree of modularity inside. The MasterCase lineup already has a big roster of modular cabinets where the Maker 5 is the company's most high-end. The barebones remain the same as with the MasterCase 5 where the Maker 5 sees upgrades in the default accessories and components. The highlighted features include a front panel lined with silencing foam, a fan and LED controller hub, a magnetic LED strip and an upgraded I/O panel.

The mainframe of the chassis is made of high-grade SECC material with hardly any flex on both the side panels. The acrylic side-window panel is susceptible to scratches and at such a premium level, it's expected to max out on all the accessories. The cabinet supports up to six 140mm fans and if you're inclined on occupying every slot, the fan hub will support all six in two modes – high (12V) and low (7V) through standard 3-pin connectors.

There's an enormous potential for cable management considering the generous number of cutouts and routes meant for cables. The PSU cage or area houses the PSU and two drive bays with enough room to store long cables. Compart-

ments ensure that thick cables can be placed inside and fastened with Velcro straps. If you plan on rerouting the front I/O panel cables away from the middle compartment, the 3M tape cable clamps (included) will do the trick. The fan and LED hub does get in the way while connecting the components so we had to route the PCI-e power and one of the SATA power cables through the cutout on the PSU cage. All the drive bays inside are removable and we removed the ones in the motherboard area. For our test, we used one of the two SSD slip-and-click trays right on top of the PSU cage and one of the HDD trays in the bottom-mounted bay inside the PSU zone. With this configuration, you'll be able to insert a 280mm radiator on the front. The front and top panel both snap on to the cabinet using magnets. Storage drive installation is tool less but if you aren't keen on using the SSD tray, you will have to screw the SSD to the bottom-mounted or middle drive bay.

Installing a full ATX size motherboard took the entire space of the motherboard plate and left almost no space near the PSU cage. This is where it becomes difficult to use the second SSD tray since the USB 2.0 header comes right in front. These two trays are quite far from the front intake fans and during our stress test, the SSD touched a maximum of 37 degrees. This shouldn't be a concern since the synthetic test are quite rigorous and your SSD will never reach such temperatures in real world scenarios. Overall, the case runs quite cool (maximum of 60 and 63 degrees for the CPU and GPU respectively) and considering support for air and water cooling, you can achieve a cool system. The padded front panel manages to keep the cabinet silent and the same can be said for the top panel. We were disappointed that the magnetic LED strip wasn't RGB and we hope RGB LED strips are released.

The company is building an ecosystem where each and every accessory will be compatible with every MasterCase cabinet. This one offers immense potential for cable management and cooling options. If you're tired of your old cabinet or are building a system with a healthy budget (you can get this cabinet for around 15k from online stores), you should definitely consider the Maker 5.
