Asus ROG G20CB

Plug-and-play PC gaming

The ASUS ROG G20CB doesn't exactly look like a PC. That is the whole point, though: ASUS wanted it to look like a console — relatively compact, with good looks that fits beside your television or a big monitor. The Asus ROG G20CB is quite angular from all angles, giving it an aggressive stance. The whole machine is painted matte black, highlighted with red accents around the edges. To complement the entire gaming design, ASUS has loaded the G20CB gaming PC with full RGB lighting.

The ASUS ROG G20CB is the not the most powerful pre-built gaming machine in the market, but if want to play games at Full HD resolution and Ultra settings, this should flaw-

lessly do the job. The Intel Core i7-6700 processor and NVIDIA GeForce GTX 980 combo has enough power to run circles around all AAA gaming titles if you are playing in 1080p or even 2K. However, the card has its limits, and pushing output resolution beyond 2K really takes the steam out of the GPU.

The ASUS ROG G20CB is for those gamers who wish for the ease of console gaming combined with the convenience of a keyboard. The ASUS ROG G20CB is a good pre-configured gaming PC that will serve your gaming needs well. However, as of now, you should hold on to your money, as ASUS is likely to be upgraded with NVIDIA's GTX 1080, in the near future.

GIGABYTE GTX 1080 EXTREME

The Premium Pack is like unwrapping your birthday present

A person opting for a flagship has money, likes to spend it and wants to feel... pampered (We couldn't think of a better word). GIGABYTE's GTX 1080 EXTREME GAMING Premium Pack is a pretty good representation of an all-in-one package that fits the bill. Also, it's the natural progression in a hardware cycle wherein innovating becomes the need of the hour as a particular class of hardware approaches becoming a commodity. Not that graphics cards are becoming a commodity anytime soon but when you have five to six brands peddling the same GTX 1080 with a slight tweak here and there, you need to make value additions to attract customers. And that's already started happening with graphics cards

coming up with elaborate cooling solutions, RGB, custom software and freebies.

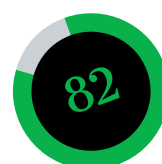

This particular GIGABYTE SKU includes a front panel dock with 2x HDMI ports and 2x USB 3.0 ports. Why HDMI? For VR, of course! Also included is a high-bandwidth SLI bridge which on its own costs roughly

3K and there's a mouse pad too. When it comes to performance, the GTX 1080 EXTREME GAMING does a pretty good job considering the fact that it is the highest clocked GTX 1080 we've received so far. 3DMark Fire Strike managed to gather a decently high score over the Founders Edition but that was expected. It's the extra goodies that has us hoping the card could be for keeps.
