ZOTAC GTX 1080 AMP! Extreme

And here come the hotsteppers

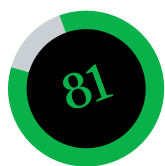

Price
₹63,250

Having taken the crown from the 980 Ti, (that is if you discount last year's GTX TITAN) the GTX 1080 has really pushed the limits of graphics processing and ZOTAC's GTX 1080 AMP! Edition aims to push the envelope even further. Compared to last year's flagships that received the AMP! Extreme treatment, the GTX

1080 AMP! Extreme takes away the triple slot design and moves back to a dual slot one. Also, the Light Id system has been renamed to Spectra with different placement for the 7-colour LED accents. The fans remain the same and the protective shroud looks a little different.

Performance wise, the card gains a significant 400 point lead in 3DMark Fire Strike over the stock GTX 1080 or the Founders Edition as it is now known while running at 1080p. And this gap grows further apart to 800 points when the resolution is set to 1440p and later narrows down at 4K resolution. Gaming benchmarks are also in the same league with the performance gap really shining through at 1440p. The pricing is similar to the GTX 1080 Founders Edition so there's absolutely no reason why you'd opt for the Founders Edition when you're going to be spending on a GTX 1080 anyways. The card is quite heavy so it would now be the apt time for graphics card manufacturers to start shipping support brackets in the box for cards on the heavier side like the ZOTAC GTX 1080 AMP! Extreme.

RHA S500i

High fidelity audio and the RHA brand without breaking the bank

The S500i goes with angular edges as a design philosophy unlike the T10i which had soft moulded curves to its housing. The S500i features aluminium alloy construction for its housing which hold the absolutely tiny (6mm) 140.1 micro dynamic drivers. The headphones are one of the lightest I've tried and fit comfortably in your ears. With the six pairs of dual density / bi flange silicone ear tips that they come with you can easily find a good seal.

The cable is fabric sheathed from the 3.5 mm jack up to the Y split and from thereon changes to a standard rubberised finish. The upper bit with rubber sheathing seems a little flimsy and is perhaps the only sub-par feature. The housing itself though light, feels sturdy.

The sound signature is quite bright and sparkly without suppressing the

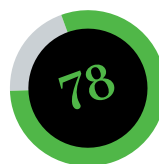

Price
₹3,999

mids all that much. The detail is nice and the bass is hard hitting. It's like a nice smooth and shallow U across the frequency spectrum. It's a joy to listen to metal or guitar driven music on these. Anything heavy and crunchy sounds superb. I'd say the detail on the S500i is a shade above the M6 Pro but the bass is tighter on the M6 Pro.

What about the negatives? There aren't many to be honest. The bright sound signature might feel harsh to those used to warmer headphones but that's just a matter of preference. The S500i is in no way sibilant. Another small niggle is that while the construction and build quality is superlative, it would've been nice if the headphones came with a hardcase. To be fair though, RHA seems to have a lot of faith in their quality as even the S500i comes with its standard three year warranty.

To wrap up, the RHA S500i is a worthy IEM if you are in the market for something that's clearly out of the entry level segment.
