

Drone saviour!

The DJI Phantom 4 drone has helped a person in surviving a heart attack in Iowa. Full story here! dgit.in/Dronesave

The Space problem!

5 years after final flight of Atlantis NASA still waiting for ways to send Astronauts to space. dgit.in/AfterAtlantis

Bluetooth Speakers

FEATURES

CREATIVE SOUND BLASTER ROAR

The first generation Sound Blaster Roar was possibly the most feature-packed speaker when it was launched, and remains so even now. The speaker can be charged via a power socket and wall adapter when you're at home, and microUSB when you're on the move. You can use it as a power bank for your smartphone, too, and if your phone happens to have run out of storage, you can even plug in a microSD card and play music from there. The speaker also includes a voice recorder, an integrated speakerphone, and a button toggles the audio delivery to Tera Bass mode for heavier bass in your songs, and Roar for even greater loudness in the tracks. At over 1kg, the Sound Blaster Roar is heavy, and its battery lasts for nine hours. Another useful feature of the Sound Blaster Roar is the Link Security switch, which gives you admin control.

CREATIVE SOUND BLASTER ROAR 2

The Sound Blaster Roar 2 has nearly everything that it's predecessor has, and combines all of it into a sleeker package that's attractive to hold and great to use. The bass drivers of the Sound Blaster 2 are redesigned to efficiently fire the low frequencies from either side of the speaker, as opposed to the down-firing bass drivers of the Roar. The sleeker build also feels of better quality, and takes about 100 grams of bulk off it. The Link Security toggle is missing from here, though. You can make the speaker stand upright without affecting quality of audio delivery, thanks to the new placement of the bass drivers.

The Roar 2 also gets raised plastic buttons against the rubberised buttons of the Roar. It retains identical battery life, but improves on wireless playback range by nearly 7-8 feet. Easily the best in class!

ULTIMATE EARS BOOM 2

The Boom 2, just like the Roar 2, looks identical to its predecessor, the UE Boom. The UE Boom 2 covers the essentials of a portable Bluetooth speaker that the activity-oriented youth would need, including Aux-in and Bluetooth playback support and microUSB charging, alongside delivering good audio, commendable battery life and water resistance. The array of colourful shades it is available in makes it one of the liveliest speakers ever made.

The Boom 2 also has Siri/OK Google support, and when paired to your iOS/Android smartphone, you can long press the tiny pairing button to activate the voice assistant built into it.

The device also supports multi-speaker setup where you can connect up to two UE Boom 2s in either stereo setup (each speaker acts as the Left and Right module) or with two speakers in multi-room setup.

B&O BEOPLAY A1

The Beoplay A1 by Bang & Olufsen is not just a portable speaker. True to B&O's signature style, the Beoplay A1 is meant to be a lifestyle product with a design that oozes class, finding the perfect place on a mahogany bedside table or even when you buckle up the original leather strap to your belt. It stands out for being the most elegant and suave of the four ensuring it's the most premium looking speaker of the bunch.

The speaker is powered by a Class D amplifier to drive tight, warm audio. It offers the best battery life in its class, offering playback of over 24 hours. The Beoplay A1, however, has the shortest wireless playback range among the four. Another downside here is the singular USB-C port and no microSD port. It won't be an issue soon when USB-C becomes ubiquitous, but for now, you'll need to sure you carry the in-box cable around, lest you run out of charge.

Features

Weight..... 1105 g
Battery life..... 9 hours
Range (without obstacles)..... 48 feet
Daisy Chaining..... Yes
Battery Indicator..... Yes, LED
Dedicated App..... Yes
Score..... 65/100
