Chrome Extensions to reinvent how you work

Don't you wish you had a few superpowers?

Jayan Visheyani
feedback@digit.in

With almost half the market share, Chrome is – by a far margin – the most popular web browser in the world. Ever wondered why? Here's why: Chrome is much more than just a browser, it's a productivity powerhouse waiting to be unleashed if you use the right extensions. You can do amazing things like read other people's mind, save your time, build better relationships, automate mundane tasks and make them run on autopilot, and much more!

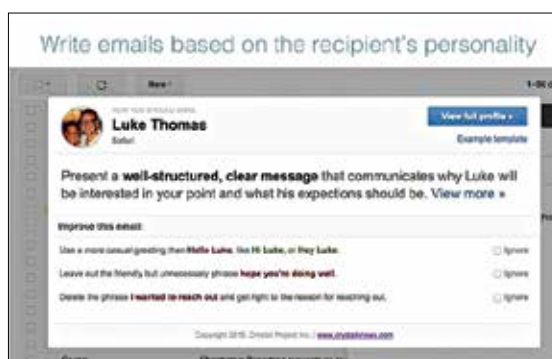

Intrigued yet? Well, let's dive right in.

01 Crystal Become a mind reader

<http://dgit.in/CrystalCExt>

Ever hesitated before sending someone an email, wondering how will they react? Wouldn't it be nice if you could read their mind? Well, now you can. Crystal will give you a fascinating peek into your recipient's personality based on publicly-available online data. It adds a button in Gmail and LinkedIn that you can click to view a profile. Crystal suggests keywords and phrases to use while interacting with someone, provides communication do's and don'ts, and practical advice on how to better work with them. Using the Write an Email feature, you can select a person and the type of communication

you need to send; Crystal will then give you a quick tip and an email coach will also provide live feedback on your message. So the next time you need

pitch an idea to an unknown client and want to increase your chances of getting a yes, just ask Crystal.

02 Chrome Remote Desktop Remotely access any computer

<http://dgit.in/CRDExt>

Sometimes you just need to remotely

access a computer – whether that may be to provide ad hoc support to a friend or a colleague, or browse files on your own system from a remote location,

or simply because it's a magical piece of tech you simply need to have in your life in 2016.

Chrome Remote Desktop extension allows you to remotely control any computer from within Chrome. Setup is really simple: You have to generate an access code using the extension and then enter this code on

the other computer, this establishes a secure connection between the two computers and you can now go ahead with impressing all your coworkers. You can find endless use cases with this extension: Use your home computer as a web server, check up on and manage your download queues, play Solitaire... the possibilities are endless.

03 StayFocusd Block

distracting websites

<http://dgit.in/StayFocusdExt>

The internet is a vast and impressive repository of information; for instance, right now, you can log on to the Wikipedia page on Aerospace engineering and gain a
