

## Apple and Google unite

Apple and Google's parent company, Alphabet have come together with over 30 tech companies to combat robocalls. <http://dgit.in/agrobocall>

## That was sick!

That's all you need to say for the GoPro Hero 5 to tag it as an awesome moment. <http://dgit.in/gphero5>

to the dismay of the fans, Bethesda announced in 2014 that they had cancelled Prey 2 over creative differences with the developers at Human Head Studios. However in E3 this summer, much to everyone's surprise, Bethesda announced finally the sequel to Prey called 'Prey'. It looks quite different but does retain the spooky sci fi feel to it. Some are disappointed that the game wasn't made according to Human Head direction. Time shall tell if this truly is the sequel the original Prey deserves.

## 08 XENIX

This is the software that gave birth to the term 'vapourware'. Microsoft wanted to have their own

Perhaps Microsoft went a little over ambitious with this one

version of a Unix operating system for various microcomputer platforms in the late 70's. Eventually, knowing that they could not compete with Unix's developer at AT&T, they decided to abandon Xenix altogether and focus on Windows NT instead. However it seemed that Microsoft didn't want to let go of the project that easily. They signed an agreement with IBM to develop a OS/2 and the Xenix team along with some of the best developers from MS DOS team were assigned to the project. However, Xenix failed to provide any competition to Unix and was sold to SCO (Santa Cruz Operation) by Microsoft in 1987. SCO eventually ended up superseding it with SCO Unix which is now known as SCO OpenServer. Sounds like Xenix was bad luck right from the start.

## 07 FIN

It was the 15 minutes of fame for a young 23 year old

Rohildev N whose Kochi-based startup announced 'Fin' back in 2014. This wearable ring seemed like something from a James Bond movie set in a distant future. Fin claimed to give users complete control of their lives just by wearing this ring and doing activities like clicking pictures, dialing someone or playing music on your Bluetooth headphones with gestures. This project gathered a lot of interest and quickly reached its online crowdfunding campaign goal. Rohildev and his team were looking for international tie-ups but a this piece of tech went unnoticed. The Fin-Ring was eventually released though, as 'Neyya' a sleeker, elegant version of the Fin, but it never really caught on. And so it seems, that we

Your life, at the wave of your hand

are yet to see such a product which delivers on these guidelines because it was a really cool idea to begin with. Something tells me this is not the last we are hearing of this concept.

## 06 BULLY 2

Who didn't love this raunchy, tongue in cheek Rockstar Games release back in the PS2 days? This game was a masterpiece in terms of storyline and moreover it was an open-world game, at a time where there weren't many non GTA games out there. This game was set up in a typically dysfunctional prep school and the

How much we would want to get into the shoes of the rebellious Jimmy Hawkins

players were put in the shoes of a young rebellious Jimmy Hawkins as he went around town with his shenanigans. The game featured some amazing playtime, with a cool spin on the factions concept, the factions being Jocks, Nerds, Preps etc. It was one of the better looking games on the Playstation 2. So then why didn't we get a sequel to this much loved game? There have been speculations of a 'senior year' or a 'college' year or a spin off from the original storyline. Much to fans delight, Rockstar announced that they hadn't forgotten about this title, but just busy with their other titles like GTA, Max Payne and L.A. Noir. There is news about a bigger better sequel in 2016. We can't wait...

## 05 LiFi

While this isn't exactly vapourware, the sheer implications of the release of such technology to the public makes us think why isn't this a thing already? It started with a TED talk back in 2011 given by Prof. Harald Hass, when he demonstrated how the LED lights can be used for signal transmission. Research and testing began and Scientists in Oxford were available to achieve connectivity even in a real world scenario. The original creator of LiFi even has a working prototype of this tech. LiFi boasts a gigantic 224GB per second speed and could revolutionize the way communication takes place all over the world. In fact there are talks of Apple having LiFi connectivity on their future iPhones.

## 04 INFINIUM PHANTOM

Ask any consolehead if the term 'phantom' means anything to them,

Imagine what implications the release of this would have had on the PC Master Race
