

HP's VR Gaming laptop

The light and thin backpack with a full desktop pc is looking good but is still in its prototype stages. <http://digit.in/hpvrglaptop>

Automatic's newest car adapter

Automatic's newest version, Automatic Pro, comes with free 3G for five years and can track your car. <http://digit.in/procart>

Feature

and he shall smirk and tell you a thing or two about false promises. Back in 2002, when PS2 and Xbox 360 dominated the masses, a new console was announced that would eliminate the need for having a physical game media to play a game. The game would simply be downloaded from an online marketplace (much like Steam) and would give better processing results than other consoles. It also had a 'lapboard' for the console which would give a PC gaming like experience. This announcement captured worldwide interest as the idea of not having to use a disc was really amazing. However, Project Phantom had a rocky future up ahead. Infinium failed to make any apparent progress and Phantom never saw the light of day, even though it had an impressive design. It sure did pave the way for Steam though.

03 RED DEAD REDEMPTION

Rockstar announced a couple of days back that they are working on 'something big'. And being a RDR fan, I'm almost certain this is the sequel

Who doesn't want to be a badass cowboy shooting Wild West fiends

to this amazing game from 2010. Rockstar is known to ace their open world games. However, this classic wild west, open worlded, shoot em up adventure was in a league of its own with amazing storyline and gorgeous graphics. It has had several added DLC's too which have been greeted by the gaming community. However, now that the games have changed and we live in an ultra FPS world, we would like to see a follow up to this classic with even better graphics and new features. Could we be finally getting

VAPORWARE THAT DID FINALLY COME OUT

1. Duke Nukem Forever

Perhaps the biggest disappointment of the decade. This beloved retro shooter got a next gen successor, But was instantly regretted for killing the legacy of the initial releases. The game failed to live up to the greatness of the series and is arguably one of the worst games ever.

2. Freedom 251

The 200 rupees phone. The miracle. The Scam? Little is known about how this product was planned to be implemented. And after shameful refunds and failures

to deliver, The creators at Ringing Bell claim they are now ready to ship these phones. However, that is another story.

3. L.A. Noir

This game took around 8 years to be made. The facial feature recognition technology used in the game is a delight but took millions of dollars and hours under development to be finished. The game finally did come out and was received well by gamers and critics alike worldwide. Rockstar always gets it right somehow.

RDR 2? Fingers crossed Rockstar! You've never let us down and we sure hope it's the same this time too!

02 OVATION

This was the product that invented the concept of 'development hell'. In 1983, a time where office-software development was in its formative years and software like WordStar, Microsoft Word were just among a few must haves for

Maybe one day we will finally get to know how this series ends

word processing and more, Ovation Technologies announced an integrated package that promised to include word processing, spreadsheet and database manipulation and communication, all rolled up into one. This idea was far fetched for the time to say the least and the team is said to have gone through 2 years of development hell, burning around 7 million dollars without any working prototype or release. The company finally declared bankruptcy in 1984, and was never heard from again.

01 HALF LIFE 3

What else did you expect to see at number one? If you are love games like we do, there is a chance you are in the same wait boat with us on this one. This is one of the most beloved and arguably one of the most important video game series. Some claim that Half Life 2: Episode 2 is the greatest game ever made. As a sequel to this great title, an episode 3 was set to release in winter 2007,

Never bite off more than you can chew

however, it has been 9 uneventful years ever since and the release of Half Life 3 has become more of a legend. Valve came out with a spin off series in the same universe called 'Portal' and it was very well received by the gaming community. There are even talks for VR versions. However, after a long wait all we can really hope for is the return of this series with the third title. Whenever it happens, its gonna break the internet. In the meantime, we can only hope that lord Gabe Newell answers our prayers. **d**
