

Kid tracking app

Gurgaon-based start-up, Evoxyz Technologies, have launched EvoSchool, an app to track your kids. <http://dgit.in/kidtrackapp>

iPhone 7 in September?

Rumours are flying about that the iPhone 7 might go on sale on the 16th of September. <http://dgit.in/ip7release>

Every month we recognise the best article written by our community members and publish it here. Keep up the good work, Digitians!

Everything you need to know about desi digital wallets

Digital wallets are evolving and adding a host of new features. Find out how this war of wallets is going to benefit the end user

Aakriti Thapar

'Money makes the world go round'. This popular saying has now translated into reality, virtually!

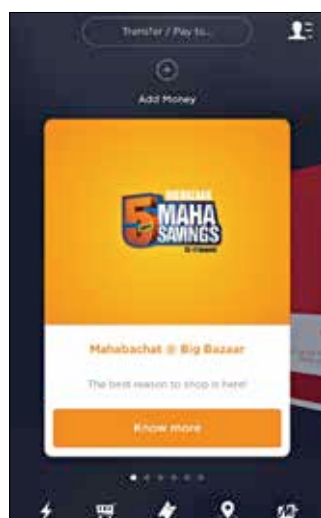

Digital wallets have entered the Indian market with a bang and they are here to stay. All you need is an internet connection and click - there goes your hard earned money! Shopping online just keeps getting easier.

Digital wallets are electronic mediums which empower the user with the ability to make e-commerce purchases. After PayPal in America, our very own desi digital wallets are pushing boundaries to carve their own niche and tap into new users. Let's take a look at a few of the emerging trends adopted by these wallets to garner more users.

Exclusivity

We are in a relationship and yes we are exclusive

Payment to chains like Big Bazaar, or booking of railway tickets on IRCTC are possible only on MobiKwik. Their exclusivity attracts new customers.

MobiKwik's exclusive tie-up with BizBazaar

MobiKwik facilitates IRCTC bookings

Integrating Platforms

Two halves form a whole

"Power Wallet" by MobiKwik integrates the online payment platform of retailers with that of the mobile wallet firm. Double blessing! Suits your convenience and the merchant's purpose.

Limitless payments and increasing limits

There is no need to draw a line

PayTM plans on digital verification synced with Aadhar. Payments will then be possible for every and any kind of service in the digital spectrum. With full KYC (Know your customer), the digital wallet limit can be extended from Rs. 10,000 to Rs. 1 lakh. Both, PayTM and MobiKwik are working towards KYC.

Merchant network and market penetration

Uncle please send us 2 litres of milk and 2 kilos of onion

By tying up with local stores and kirana shops, the apps are reaching out to all sections of society. In the process, they are also building a strong network of merchants.

In order to further increase its merchant network and market penetration, PayTM has also been aggressively targeting the single screen theatres to bring them onto their platform to boost their ticket bookings, especially in the urban areas. Several Uber and Ola drivers also accept money transfers to their personal wallet accounts directly, such as PayTM.

App point

"But mom see! I'm collecting points and soon I will buy you something for free!"

Just as you get points for a purchase in a store, wallets have started offering points which can be used to make payments for any service/commodity. (Oxygen reward points)

Benefits over credit and debit cards

"Why use plastic when you can go green digitally"

Making payments via digital wallets are incentivised by offering the benefits that are provided by credit/debit cards - Cashback, discounts, etc. (PayUMoney offers 5-10% discounts on almost all services).
