Value added services to customers

"Catches the eye and pushes the finger"

In addition to the discounts, wallets are offering several promos and coupons. If you use OlaMoney to make any payment, you may get a coupon for any of the hotels/restaurants affiliated with the digital wallet. PayTM calls them the "Big savings offers".

Eg: Giftcards by Amazon, a pre-paid instrument.

Sharing Money

"Because sharing is caring"

Apps like Oxigen allow you to share money with friends and family over various social media networking sites like Whatsapp, Google+, etc. This comes as a blessing in disguise as you will no longer be stranded if you forgot your wallet at home. All you need to do is - keep your wallet close, but keep your friends closer!

Emergence of mini-banking institutions

"Carry your bank in your phone"

Digital wallets will become even more attractive to the customers in the future because of it's banking like functions. Remittances in developing countries are likely to grow. Some financial institutions already have their own wallets - SBI Buddy and ICICI Pocket.

Emphasising on the safety proposition

"Trust is the foundation of any relationship"

As trust is the virtue that can make/break a customer's financial dealings, wallets are investing in several security measures to rope in new customers. While making payments via digital wallets, a password is required for the auto-fill form. This feature therefore keeps unauthorised users away from personal information stored on devices. The user's credentials are passed on via SSL (Secure Socket Layer) encryption. Authentication of the holder's creden-

tials is also possible using these wallets. A holder's driving license or any such identification can be stored on his/her device which can be transferred to the merchant using near field communication providing proof of identity and age.

Range of services

"Gourmet Buffet with cuisines from around the world"

From paying bills to online shopping, wallets are expanding their reach by including services by the day. PayTM offers a facility of "Income Tax E filing" and incentivises the same by giving the users Rs.100 in their PayTM wallets.

Desi digital wallets have been successful in making a huge proportion of the Indian population subscribe to their service. The leading desi digital wallet MobiKwik has more than 25 million users. As per a report by TechSci Research India (India Mobile Wallet Market Opportunities and Forecast, 2020), the desi digital wallet market is predicted to reach \$6.6 Billion by 2020. However, there is still a long way to go as there would need to be a change in the deep-rooted habits of Indians for a 100% conversion. The world is switching to digital payments and before that happens, Indian wallet companies need to devise a method wherein inter-wallet payments are made a reality. This would be possible if authenticated by a third-party authentication service.
