

Put2Go

Deaths occurring in car accidents are tragic, no doubt, but they're equally foolish if the reason for the car crash happens to be using a smartphone while driving. Driving is one such activity where you aren't expected to show off your multitasking abilities. Of course, it's essential when it comes to certain things like using the GPS, but with the regular mounting techniques available to us, it isn't that easy. The Put2Go car mount uses a magnet to clamp your phone to the dashboard firmly, so there goes all the pain of having to mount your phone. The ball and socket joint makes it further easier to have an option to swivel your phone around to any desirable orientation (our best bet would be on portrait or landscape). Sounds sweet, but smartphones aren't known to display the best battery saving stunts while using a GPS. However, this device takes care of that by including a wireless charging unit inside. Now, don't expect your smartphone to magically start charging since your device needs to support Qi Wireless technology at the hardware level in order to be able to charge wirelessly. While most of

the current-gen smartphones recommend a minimum of 2A in power output for charging, here you'll only get a 1A output, so charging will be slow but better than what you'd normally have available in your car. For \$39, you can make it yours by backing the project or pay \$20 dollars more for the product.

SOMETHING EXCITING THIS WAY COMES

The Digit e-mag app is now listed on app stores

It's still in beta though. We're perfectionists and want to make the app even better before the "official launch".
