MOBILE WATCH

Stylish, glamorous and interesting smartphones are always on the horizon. We take a closer look at what's hot in this space...

Xiaomi Mi Note 2

The next big thing coming from the dominating players in the budget smartphone market always make news and this time Xiaomi is gaining ground on the upcoming Mi Note 2. Fresh rendered photos have landed that show design similarities to the Galaxy Note 7 while encompassing the style of their own Mi 5. This will be yet another smartphone to supposedly house a 12MP dual-rear camera which seems to be the RGB equivalent fad in smartphones. The specs are reportedly amazing with a 5.7-inch Quad-HD display, powered by a Snapdragon 821 chipset, 6GB of RAM and around 128GB of internal storage, juiced by a 4,000 mAh battery.

Nexus Marlin/Sailfish

It's been way too long since the Nexus 6P and 5X were launched which means that we are now heading towards the launch of new Nexus devices from Google. Manufactured by HTC, the two devices have been codenamed Marlin and Sailfish, making it evident that they are going to follow the same path they took with the previous two versions. Marlin is said to be the equivalent of the 6P hence it's expected to sport a 5.5-inch display and a minimum resolution of 1400 x 2560. Whereas the 5X's equivalent is the Sailfish supposed to include a 5-inch display with a 1080 x 1920 resolution. Both the devices should be running on the latest Snapdragon 820 SoC while we wait for more leaks to reveal rest of the specs. Several leaked photos have appeared online and if we were to assume them to be legitimate ones, Google is clearly hinting towards the design of the legendary Nexus 4. This means that we could expect a glass back on the new Nexus line, giving away with the current trend of all-metal body smartphones.

LG V20

Fresh off the rumour mill is LG's next flagship smartphone, which is supposedly going to be the first phone that ships with Android Nougat 7.0 out of the box. At the time of writing this section, we weren't sure about the phone's release, while the Internet is flooded with leaked images of the device. We don't know much about the special features packed into the phone except a dual-rear camera. The internals haven't been confirmed by anyone yet and going by the rumours, it will supposedly run on a Snapdragon 820 processor. The Quad-HD screen is supposed to be around 5.5 inches. The ticker screen on the previous V10 might be carried on in the new version. Until now, there isn't anything extraordinary about the phone other than the beefed up internals. It's reported to launch at a price of \$650 without a contract.
