

Kyocera DuraForce Pro

We know that out of all the basic necessities of an adventurer heading out for an, you guessed it, adventure, is an action camera before every other gear. But you are forced to carry your smartphone along because you aren't Bear Grylls and you might need assistance if you're stranded. Kyocera has found the middle-ground and launched a rugged Android smartphone equipped with a separate wide-angle 1080p action camera. The IP68 certification should be evidence that it is meant for rough usage in the wilderness while the Military Standard 810G proves its durability against extreme pressure, shock and temperature. Apart from the tough exterior, it has mid-range hardware inside but that's not their focus. The

135-degree action camera is almost the same as offered by standalone action cameras, and it supports slow-mo and timelapse videos as well. There's a dedicated Push-To-Talk (PTT) button on the phone to use it as a walkie-talkie with other phones with similar support. The phone doesn't have the best design and looks more like a regular phone inside a hard cover case. There's no mention about its price but this could serve as a really interesting piece of gear in an adventurer's backpack.

SPECIFICATIONS

CPU: Snapdragon 617 | **Memory:** 2GB
Internal storage: 32GB | **Display:** 5-inch 1080x1920 | **OS:** Android Marshmallow 6.0 | **Battery capacity:** 3,250 mAh
