

Cards on Chrome tabs

On popular demand, Google finally extends Google Now cards on Chrome new tabs <http://dgit.in/ChrCrds>

FSociety's ransomware

A ransomware software that uses FSociety's logo and its ransom screen has been discovered and could be in use. <http://dgit.in/FSocRw>

makes it an incredible quick access companion. The first party Photos app allows you to control where you want the slo-mo to happen, but let's be honest that's not much of control. Slow Fast Slow lets users both decrease and increase the speed of videos. The app provides a simple node-based system to form speed curves on the timeline, so you can get both time-lapse and slo-mo in the same video with smooth transitions in between. The speed can be increased up to 8x and decreased down to 16x. Standard features such as trimming and reversing videos are present along with a toggle to change the audio pitch.

CamScanner

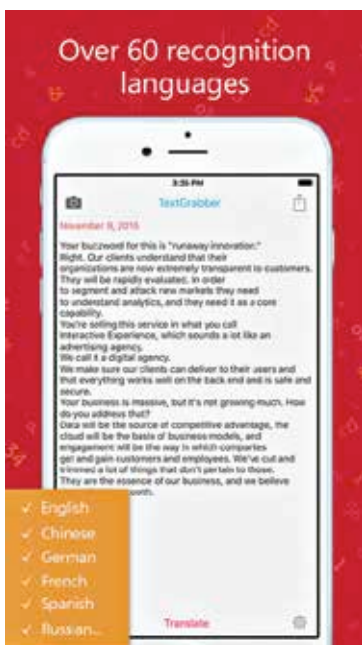

Price: Free (Offers In-App Purchases)

The name says it all for this app. Using a device's camera, the app turns an image into a scan using a selection of ingenious filters. These filters are designed to highlight the contents of your documents and increase the contrast with the page while keeping it readable. The app picks up a filter automatically judging by the type of photo, but also lets you change it yourself. You can use corner pins to mark

just the document from the photo you clicked and the app stretches the document into a full screen rectangle. There's a batch shoot mode which puts all the scanned images in a single document. Once you're happy with the scan, you can either save it in the camera roll, mail it or upload to one of your cloud accounts as PDF document or images. You can also invite people to see your scan and comment on it.

TextGrabber

Price: ₹300 (Offers In-App Purchases)

Similar to CamScanner, this app scans your documents and generates machine-encoded text instead of images. It's a portable optical character reader. As of the writing of this article, the app can read 61 languages. With an In-App Purchase the app can also translate the scanned text to 91 languages. It's important to note that the app doesn't provide an automated language recognition, you'll have to mention what language the app is about to read. The app might have a steep price point, but it is aimed at power users – frequent travellers, translators or anyone who is regularly involved in the digitisation of information. The app delivers exceptionally for what it's supposed to do and is a solid portable option.

GIF Viewer

Price: Free (Offers In-App Purchases)

iOS has always been short on supported file formats and it stays the same for the über popular format GIF. But don't worry, GIF viewer has got your back. GIF viewer lets you import GIF files to the app from your camera roll and voila! You have your GIF animating. Apart from simply viewing
