

Get a tripod to balance the camera

anything bigger causes the camera to dip down towards the front. In such situations, using a tripod is ideal, instead of hand support.

Shutter speed-Aperture interrelation

Not understanding the concept of exposure - Shutter speed and aperture are inversely proportionally related to each other. Higher aperture requires a slow shutter speed to maintain correct exposure and vice versa.

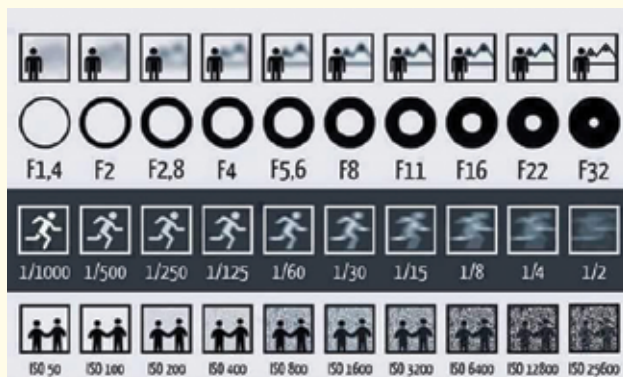

Increasing the ISO

Even though entry-level cameras allow ISO settings to be increased till 800, anything above 200 ISO will create a lot of noise in the picture and spoil the image. Using the optimal settings of ISO 100, up to a maximum of ISO 200, is recommended.

Avoid the flare

Amateurs usually face this issue even with the right settings. A flare is caused by non-image-forming light that bounces inside the lens, reducing contrast and sharpness. Changing the angle of shooting or using a lens hood are the easiest ways for tackling flares. Check out the correct way to use a lens hood if you feel you're out of your depth here.

Correctly varying the shutter speed and ISO makes a world of difference

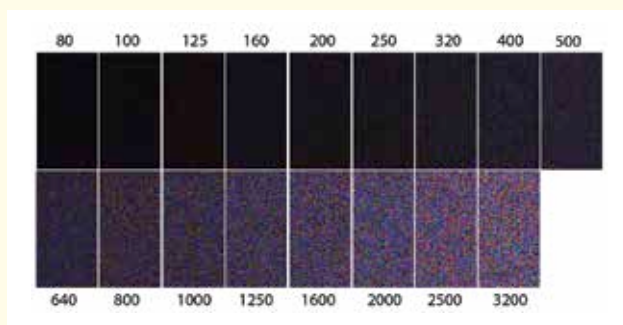

The 3Cs (Check, Charge, Clean) :

Last, but not the least important - Not following the 3Cs

a) **Check:** Check whether or

self proclaimed photographer inside us. Prisma catalysed this with AI-powered photo editing feature. With the ever increasing apps and the improving camera technology every year, the count of people

Don't push the ISO beyond 200 unless you know you need it

not the memory card is present in the camera before you are ready to shoot.

b) **Charge:** Remember to charge the battery regularly, and do not leave it in the battery compartment when the camera is not in use for extended periods.

c) **Clean:** remember to clean your camera equipment, to keep it free from dust, moisture and fungus.

MOBILE-BASED PHOTO EDITING

With the increasing trend to post coolest photos on social networking sites comes plethora of apps that lets you manipulate your photos. Thanks to Instagram for making even a sullen photo look artistic and invoking the

relying on the mobile photo editing tools are exponentially increasing. To make the most out of each app we have curated some interesting tips and tricks that you should try out.

Try Instagram stories

Instagram unleashes the biggest blow to Snapchat by launching Instagram stories. It is exactly the same feature that Snapchat offered for ages. Rolled out on both platforms - iOS and Android - you can get it directly by updating the app. The app's UI is revamped to fit in the new feature which is directly accessible from the "Home" section.

In the home section you'll see one or more small circle(s)

with your followers profile pictures. These circles are the buttons representing their stories. Just tap on the circle to view the story. To add a story, tap the "+" button located at the top or just swipe over to right. In the either case, the camera will launch allowing you to snap-a-story.

Try different pens in Instagram Stories

After you've taken a picture, you'll see a drawing tool at the top. Tap the button to reveal different editing tools. You get three different pens: a classic pen, a chisel pen, and a glowy pen. Addition-

Move the slider for precise drawing

ally, there is a slider at the bottom to change the size of the pen, and a colour palette to change the pen colour. The colours are added as a stroke that makes the pen look like a lightsaber. Use these tools in combination to make your photo look cooler.

Hide Instagram story from certain people

One of the best thing of Instagram stories is the ability to hide your story from certain
