

plete suite for photo editing right on your phone.

Open your photo in Snapseed and hit the “+” or “Pen” button to start editing. You’ll be taken to the new menu that gives you options to tune, crop, add filters, etc. Go to the “Tune Image” mode and manually tune your photo. Alternatively, you can also click on the “Magic wand tool” located at the bottom to automatically tune your image to what Snapseed thinks is a perfect image. (iOS - <http://dgit.in/iOSSnapseed>, Android - <http://bitly.com/AndroidSnapseed>)

Remove unwanted background objects using Snapseed

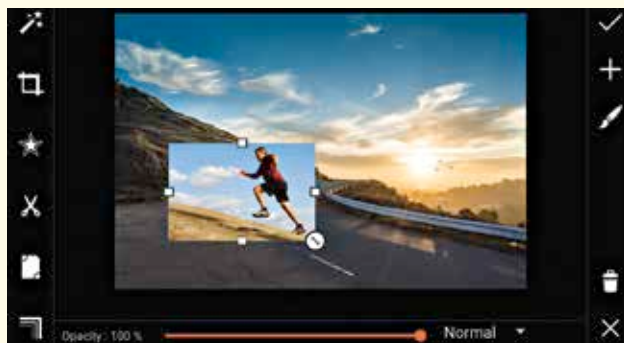

If a portrait photo snapped from your phone has lot

Apply Vignette only on the subject in the image

of unwanted objects in the background, then you can use Snapseed to remove all of them. This process includes quite a few steps to be followed. The intensity of these steps might vary depending upon the image, but eventually you’ll get a good result.

Open a photo in Snapseed > tap the edit button > select Drama filter > Drama 1 > hit the tick button. Next apply black and white filter by selecting Black & White under filters > choose Contrast filter > hit the tick button. Before hitting the tick button you may adjust the contrast and brightness of

Easily resize and rotate the added image

the photo by swiping up and down on the image.

Now you need to use the Vignette tool to make the corners of the photo darker, thus darkening the background making it easy for you to remove the rest of the unwanted objects. To do this, select Vignette tool under the tools category. Just move the brush along the image to see the real-time preview of the effect. The area under the brush’s circumference will remain lighter. Change the size of the brush (by pinching) so that it highlights the subject in the image.

Finally select Brush tool and choose “Dodge & Burn”, set the Exposure to -1.0 and start burning the background. Be meticulous while doing so.

Change image background using PicsArt

One of the coolest uses of popular photo editor PicsArt, is to change the background of a image. To do so, open PicsArt and select a photo that you want to add as background. In the toolbar below, select Add photo > Single photo > choose the image you want on the foreground. After the image is added, tap the scissor icon at the top. This will open the crop tool for the added image. Select brush and highlight whatever you want to crop out of the image. Hit the tick button to see the result.

Post full-size photo to Instagram

For Instagram, you need to crop your full size photos to a square to post them, losing significant content at times. To deal with this you can use a third-party app called “No Crop & Square for Instagram”. It’s a free app that allows you to post full-size photo to Instagram. Add your rectangular photo to the app, it will automatically add background blur keeping the aspect ratio constant. (<http://dgit.in/NoCropSquare>)

Take cool selfies

Revamp your traditional selfies with cool masks and effects using this free app - MSQRD. Available on both iOS and Android, it masks your face with Zombie, Panda,

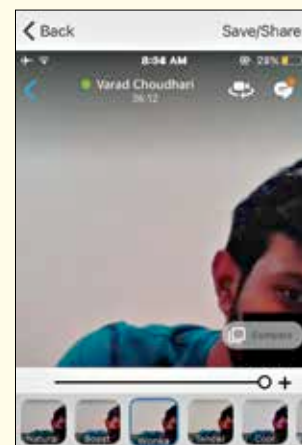

Choose from hundreds of face masks (more than Snapchat)

and supports faceswap. This is a standalone application that serves the same purpose as Snapchat. Another cool feature is that you can also broadcast your funny face live. (iOS - <http://dgit.in/iOSMSQRDApp>, Android - <http://dgit.in/AndroidMSQRDApp>)

Fix your selfies

Your selfies can be tuned up to make them look a lot better. Among our top choices for apps that do it for you on the iOS platform is - Microsoft Selfie. Microsoft Selfie uses intelligent algorithm that

Choose different filters in Microsoft Selfie

analyses the age, gender, skin tone, and lighting. Based on this analysis it automatically enhances your selfie making it look natural. (<http://dgit.in/iOSMicrosoftSelfie>)

The Android counterpart would be AirBrush. It is not as smart as Microsoft Selfie, and makes you apply each fix manually. The app offers various fixes such as: blemish remover, concealer, bright eyes, etc. Although it does take more effort than the iOS option Microsoft Selfie, if you know exactly what you want, then this one can be quite a useful yet quick tool to fix your selfies quickly (<http://dgit.in/AndroidAirBrush>)
