ASUS ROG G752VY

The Heavyweight

The ROG G752VY is the most powerful gaming laptop ASUS makes. It has the Intel Core i7 processor, 16GB of RAM, NVIDIA GTX 980M GPU, NVMe SSD, a NVIDIA G-Sync enabled display, Macro keys, and a suite of other gaming oriented hardware. Simply put, it has quite the resume. While it has its downsides, there are plenty of things to like.

Let's start off with the design. Despite the bulk, the ROG G752VY has a nice design. The angular design pattern, metal lid with LED inserts, glowing ROG logo, and big orange coloured vents add up to offer a mean gaming machine. All this makes the G752VY looks cool and give it a very striking design

The other good feature on the ROG G752VY is the NVIDIA G-Sync enabled display, which is an imperative for the top-end gaming laptops. The 17.3-inch matte panel on the ROG G752VY is one of the finest we've seen on a gaming laptop. The colour saturation is good, the viewing angles are great, and is perfect for gaming at 1080p. More importantly, thanks to G-Sync, we were unable to find a single screen tear or any imperfection during our three week long testing period.

The keyboard on this thing, is another ace up its sleeve. The laptop has a nicely laid out keyboard, with slightly larger keys and ample pitch (distance between any two keys). Compared to normal laptop keyboards, which have a travel distance of less than 2mm, the keyboard on the ROG G752Y offers 2.5mm key travel, which not only makes typing on the machine a little easier, but gaming more intuitive, as well. Above the keyboard, the laptop also features five macro keys which can mapped to open applications and can be used in-game as well. The touchpad on the laptop is equally good.

The Asus ROG G752VY is one of the most powerful laptops you can buy today. Powered by an Intel Core i7 6700HQ processor and a NVIDIA GeForce GTX 980M GPU, the system can handle all the latest games. With this powerful duo, our test machine was also equipped with 16GB of RAM and a dual storage system. There is a faster 512GB NVMe drive and an extra 1TB drive for extra storage options.

Gaming on this laptop is just superb. We ran every game we had in our library, but the laptop

refused to flinch, even once. The combination of a faster processor, the best laptop GPU and a G-Sync panel, makes every game you play on this machine look good. Asus's pre-installed ROG software even allows users to do easy over-clocking on both the CPU and GPU by 100MHz.

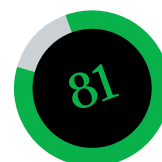

The gaming sessions are further enhanced by the excellent audio quality produced by the 2.1 speaker system. The two main speakers are placed on either side of the display hinge and hence the sound coming out of the two speakers is resonated against the metal lid. These speakers are aided by the single woofer at the bottom of the laptop. The whole setup is able to produce a very wholesome sound experience but we think it could have been louder.

For cooling ASUS has used a vapour chamber cooling system on the G752VY. With the vapour chamber in place, the ASUS ROG G752VY does a fantastic job at keeping everything cool. The average temperatures we recorded on the machine were around 50 degrees and while benchmarking, the temperatures never went above 80-85 degrees on the CPU and GPU temperatures remained consistently below the 80 degree threshold. Further, even at higher loads, the laptop remains quiet.

The battery on the other hand is the only sore point of this laptop, although we weren't anticipating much anyway due to powerful specification sheet. Now, we won't suggest gaming on the laptop on battery, the 8 cell 88Whrs battery dies in about two hours of normal usage.

The Asus ROG G752VY is very powerful and offers G-Sync, vapour chamber cooling making it the best gaming laptop under 2 lakh rupees.
