

ASUS ROG STRIX-GTX1060-O6G-GAMING

More quality, power, money

Price
₹31,350
(+ Taxes)

If you put the RX 480 and the NVIDIA 1060 STRIX units side by side, you wouldn't notice any difference at all. So there's much we can talk about in terms of new features than we did in the RX 480 review. The cooling solution is the same, and it comes with the same Aura RGB lighting and has the new ASUS FanConnect

Performance.....75
 Build75
 Value for Money65

Specifications

GTX 1060: CUDA Cores: 1280; Texture Units: 80; ROPs: 48; Core Clock: 1645 MHz; Boost Clock: 1873 Mhz; Memory Clock: 8208 MHz; Memory Bus Width: 192-bit; VRAM: 6 GB; TDP: 120 W; Score: 72

feature. The VRM circuit differs a little in that the GTX 1060 has a 6+1 power phase since it dedicates one phase for the memory and the remaining phases for the GPU.

In terms of performance, the reference GTX 1060 scores 5781 in 3DMark Fire Strike Extreme and the ASUS STRIX 1060 scores 6114 in the same test which works out to be a 5.7% increment in performance. Similarly, in gaming we ran Grand Theft Auto 5 and Ashes of the Singularity to note the performance differences between the reference card and the STRIX. In both cases, the difference was around 3-4%, which again, is scaling according to the clock speed increment. So how's the card? Like with the RX480, you are getting good build quality when you get an ASUS card but the 1060 is even more expensive than the RX480. And the RX480's multi-GPU config edges out the 1060 in comparison.

ZOTAC GTX 1070 AMP! Edition

Why bother with a GTX 1080?

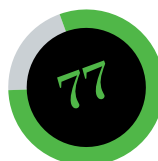

Price
₹37,700

After having testing the GTX 1070, we were left wondering for reasons to get a GTX 1080 over the GTX 1070. There are hardly any reasons aside from the fact that you don't honestly care about price/performance. ZOTAC's GTX 1070 AMP! Edition boasts of a 101 MHz overclock which is on the higher side among NVIDIA

SKUs. While the AMP! Extreme is even higher clocked and has a cooling solution with three fans instead of two on the AMP! Edition, the price difference between the two have whittled down to such miniscule level that you'd prefer the AMP! Extreme. Coming to the features, the twin fan cooling solution isn't a step back from the other triple fan cards we've tested. In fact, peak temperature levels work out to be the same thanks to the load line calibration of the fans.

Coming down to performance, we noticed a difference of roughly 22 FPS between the GTX 1070 AMP! And the reference GTX 1080 while running at 1080p. Similar patterns were observed with most of the other game benchmarks as well. It obviously makes no sense to pay ₹20,000 extra to get an FPS gain of just 22 FPS. Which is why the ZOTAC GTX 1070 AMP! Edition counts among the best you can get for your money at the moment.
