

An app to combat depression

Many apps claim they can help with depression and anxiety, but do they actually work? Here's one that might <http://dgit.in/fightsadapp>

Password creation tips

Creating a strong password can be tough, especially with many accounts to juggle. here's some tips <http://dgit.in/stronkpw>

Samsung 55KS9000 SUHD TV

Samsung joins the HDR party

Price
₹2,59,990

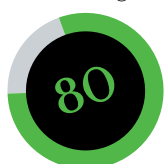

Samsung's flagship SUHD TV is good looking, premium and expensive. It is also one of the few HDR capable TVs in the market today. The company has used its Quantum Dot technology to enhance the colour depth of the TV, and colours look great, but

oversaturated. To many, the picture may look artificial due to these colours.

The TV also softens images a bit when viewed from up close. That said, watching this from six feet or above, your eyes tend to focus on the colours more than the softness. At the lowest brightness settings, the contrast ratio reached 4170:1, which is quite good. Audio is quite clear and the TV's output of 60W RMS is enough to fill up medium sized rooms. The TV runs on Tizen, which we think is the fastest TV OS right now. However, we found more streaming apps on Android TV than Tizen, but LG's WebOS is in the same boat.

While HDR video is hard to get in India right now, if you're spending this much, we'd recommend being future ready, rather than buying a non-HDR capable television, and definitely consider this unit.

HGST TOURO Mobile USB 3.0

Speed and reliability

HGST drives have been gaining quite the reputation in the market for being very reliable thanks to reduced RMA requests. So it's a no-brainer when it comes to HGST drives that you're paying for a massive capacity that's probably going to last you longer than the competition. Inside the TOURO Mobile is actually a WD30NMRW. While not much information can be found about this particular drive, we ran the usual set of benchmarks on the device and found the results to be quite average for sequential data transfers using synthetic test suites. However, the moment we switched to real world tests we immediately saw the difference.

Price
₹14,200

The driver is certainly ahead most of the competition except than a few stalwarts. The TOURO Mobile handled Intra-drive transfer speeds and large assorted data better than most of the competition as well. But here's the difference, while commoditisation has driven most manufacturers to provide more value added services like 200 GB of cloud storage, using the hard drive as a power bank, etc., the TOURO Mobile only provides a 3 GB cloud storage. While 3 GB is more than enough for backing up the absolute essentials, it does fall short against the competition. So looking at the broader picture, we're paying for higher quality and comparatively higher performance making the TOURO Mobile a pretty good value offering for ₹14,200.
