

Buying game bundles

If you're interested in trying out new games across genres, buying game bundles is your best choice. These bundles usually follow certain themes based on their genre, publisher, category, platform etc. For example, you might spot an indie bundle or a 2K bundle. Rarely, you might also come across your favourite game(s), sometimes even triple A games in a bundle, at an impressive price. Websites such as Humble Bundle, Bundle Stars, Daily Indie Game, etc., conduct weekly and monthly bundles. To browse and stay updated on every website offering game bundles, your best bet would be the subreddit [/r/Gamebundles](https://www.reddit.com/r/Gamebundles).

IsThereAnyDeal.com is your aggregator site for game deals

are a few websites to check out such as GameXS, GameLoot and Overcart. Once you're done playing, you can sell off the game as well, so that others in a similar situation as yours can acquire the game.

Find the best game deals

Similar to the above mentioned aggregators, IsThere-

Trust us, Humble Bundles can really surprise you!

Buy pre-owned games

Not all of us enjoy good bandwidths at home, hence when it comes to buying games, we are dependent on physical copies. But physical copies are expensive, especially big titles. Unless you're super excited about a game to such an extent that you've pre-ordered it, a better way would be to wait out for sales. The best way would be to buy pre-owned games either from retail stores that offer such convenience or online marketplaces. There

AnyDeal.com is the answer for video game deals. The discounts and sales listed will be applicable in India if the publishers and distributors have kept these sales international, which is always the case. It's a comprehensive and granular website that helps you filter out the platform and genre, making it easier to discover more games. Here, you'll be able to find deals on games, bundles, giveaways and vouchers. This website is indeed the Swiss Army Knife to discover gaming deals.

EMAIL PRODUCTIVITY TIPS

At this age, it would be difficult to believe someone on the Internet who doesn't have an email address registered on Gmail. Having used the service over the years, we've observed many who haven't really explored the full potential of all the features and options available. Apart from the common tricks such as creating filters and labeling emails, here are several of those important tips that will turn you into a power user.

Use Gmail while offline

The Internet conking off doesn't mean that you should be slacking back on replying to your emails. From the big guys themselves, the Gmail Offline app saves all your emails in your browser and you can continue sending out replies to all of them. Once the Internet is back up, your emails will be sent. Download it here: <http://dgit.in/GMOffline>

Appending the '+' sign

Filtering out your email from bogus promotional content is always a goal for people who keep their inbox organised. Before you head off to creating filters, an initial step while signing up for services would be adding a '+' sign after your email address with any com-

bination of letters or numbers. So, instead of entering agent001@gmail.com, we can add agent001+laptop@gmail.com while signing up for queries related to laptops. Now, this will enable us to directly filter out responses to this address by creating a filter of agent001+laptop@gmail.com. This efficiently helps you in building a wall around you against services who might have acquired your address. You'll be able to determine the service that shared your information using the specific combination you entered.

Quite close to the above tip is the use of periods within your email address. You must have probably figured out by now that periods don't matter wherever you place them in your email address. But it does help you do a preemptive filtering just like above, where you enter the periods accordingly and create the corresponding filter.

Using canned responses

When there's an unwanted call, we are quick enough to send preset messages such as "I'm busy, talk to you later." The same can be done in Gmail as well. This feature needs to be enabled from Settings > Labs > Canned Responses. After enabling, you'll find an extra menu named 'Canned Responses' appear in the 'More options'
