Adobe's creative Spark

You don't need to be a professional to create cutting edge videos, photos or web pages. Here's how...

Varad Chaudhari
readersletters@digit.in

Adobe has launched a free web-based tool, dubbed as "Adobe Spark" that allows non-professionals to create professional looking visually intensive graphics within minutes. Derived from the company's popular iOS apps Adobe Post, Adobe Voice, and Adobe Slate, Adobe Spark is a single app aimed at providing graphics creation tools on the web - making it platform friendly.

Spark offers three features under the app: Spark Post, Spark Page, and Spark Video. The Spark Post provides a neat way to create social media graphics for birthdays, events, contests, and advertisements. Spark Page lets you deploy simple web stories with multimedia content embedded. Along with the ability to display every type of layout such as simple blog post, photo journals, portfolios, catalogs, etc. Spark Video allows you to create simple videos for different use-cases by taking examples covering all type of elements such as text, images, icons, and themes.

Being a web app, you can find it at <https://spark.adobe.com>. The landing page bestows you with a broad overview of everything it has to proffer. To start your creativity hit the "Start now for free" button located at the top-right corner of the page. Adobe provides standard login options - login with Facebook, login with Google, sign up manually, and additionally a way

to login using Adobe ID (if you have Creative Cloud subscription). Login with the option suited to you to continue, and respond on the subsequent prompts accordingly.

With this done, you'll be greeted with the three features - Post, Page, and Video.

Create an Adobe Spark Post

You can create memes, inspirational quotes, announcements, and everything that you want using Post. Hit the "+" button under the Post to initiate your creativity. Enter the title of your post under "What do you want to say?". Also, select the size for the post from the banner located at the bottom of the page. Hit "Continue" when you're done.

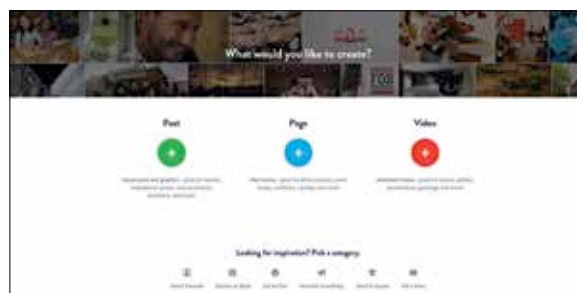

A post displaying your title will be created with a default theme initially. The top navigation bar offers you various options including: Resize, Theme, Palette, Background, and Text. Here's what each of those do.

Resize - Go to the Resize menu if you want to change the poster size you had initially selected.

Theme - Choose from gamut of different themes to make your post look

professional. A side strip with a lot of themes will be presented to you. Select a theme of your choice.

Palette - Palette offers different colour sets to apply over your theme. It

Click the "+" button below the feature to start the app.

The minimal UI is self-explanatory

automatically suggests different colour palettes based upon your background image and the colour of the text.

Background - Background lets you replace the background with image or colour. After choosing background, you'll have two tabs to choose: Photo, and Color.

1. Photo - Under Photo, click on "Replace photo" button to add a custom background image. Here,
