

For a secure internet

CloudFlare has updated its encryption features including automatic HTTPS rewrites. <http://dgit.in/SecCFlr>

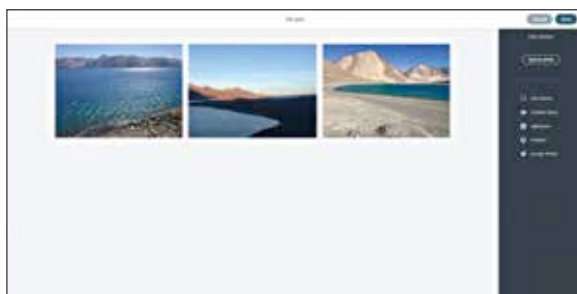

Your Tinder Anthem

Tinder now allows link to your Spotify account to share details such as most-played songs. <http://dgit.in/SptfyTndr>

To add a button, select the “Button” option, and a new popup for customising the button will appear. You may add the title of the button and the URL along with setting the alignment of the button.

see how your story looks. To share on the social network, click on the “Share” button. Projects created with Adobe Page cannot be downloaded, you may only share them with friends with a link.

Add as many as photos to the grid, it will look like this.

Create an Adobe Spark Video

One of the coolest feature of Adobe Spark is the Spark Video. Adobe has taken the simplicity and the elegancy of the videos to a whole new level. On the landing page select Spark Video and you'll be navigated to

the video making playground. To start with, provide a title to your video when the page asks for “Every story starts somewhere”. You can always change the title later, however, we recommend you do it before moving further.

In the next step you choose a template for your video out of the seven pre-designed templates available. If the template doesn't fit, you can always create a personalised template entirely from the scratch.

After you've selected your template, you'll see the workspace to start creating your video. On the right is the tools panel to select themes, music and layout. There's an additional panel at the bottom showing you , in the form of

an array of slides, the video will be having. You can navigate between the slides from here and add/modify elements on it.

To start with select a theme from the available ones (from the right side panel). Click on the “Layout” button located at the top corner and choose a layout for your current slide. The layouts range from One Thing, Two Things to Thing + Full Photo.

After the layout is selected, click on the “+” button on the canvas to add an

element which can be an Icon, Photo, or Text. To start the video a photo will always be a good option. Click on “Photo” and upload/search for a photo online. You can decide the duration of particular slide by clicking on small button “2s” located at the bottom right of the canvas. If you are done modifying the first slide, click on the second slide's thumbnail in the bottom panel. On the next slide, select a layout according to your requirement first and add a text. This will be the title of your video. Similarly, repeat the process for each slide. To add more slides, click on the “+” button located on the bottom panel. You may add as many slides as you want.

Finally, to add music click on the “Music” button located at the top right of the page. You'll see list of available tracks to choose from. Hover over the track and click on the play button to preview the track. Choose a track by selecting it. You can upload a music file from your PC by clicking on “Add my music”. Alternatively, you can also narrate audio through microphone by clicking on the red microphone button. Once this is done, your video is com-

The video creation workspace is analogous to PowerPoint.

plete. To preview your video, click on the “Preview” button located at the top.

To share your video click on the “Share” button located above. Enter title, subtitle and the category and create a link to share with friends. Additionally, you can also click on the “Download” button to download the video in MP4 format.

Adobe Spark can definitely be your primary tool for poster making, photo editing, and presentations because of its elegance and ease of use. 

4. **Adding Video** - Just like photos you can also add videos, however, a video cannot be directly uploaded from the PC. The video needs to be uploaded to YouTube/Vimeo. Click the “Video” option to add video > paste the YouTube link of the video that you want to add in the text box provided > Save.
5. **Adding Photo Grid** - The Photo Grid option lets you create a grid of your photos and add it as a single page. To do it, select “Photo Grid” and you'll be navigated to a new window to make your grid. Following the traditional approach, add a photo by uploading it from your computer or searching it online. You may upload multiple photos by repeating the steps. After all the photos are added, click on the “Save” button located at the top right corner of the page.
6. **Adding Glideshow** - Finally, you can add a glideshow which will add a new page of slideshow to show more of your photos or creations. Click on “Glideshow” button > upload/search photos > Click “Save”. Once the background of glideshow is created, you can now add quotes or text, photo, button or a video over it. Click on the “+” button that appears as you scroll the slideshow and add an element. That's it! Once you are done adding pages, click on the “Preview” button located at the center of the nav bar to
