Let's get the obvious stuff out of the way. Sony is replacing the originally-launched PS4 with PS4 Slim.

You won't find the 'Slim' tag on any PlayStation box or promotional material. The new PS4 will go on sale in "most regions" from September 15, and will be priced at \$299 (₹20,000 approx. directly converted). The console has a matte finish with physical buttons for power and eject. It still has two USB ports on the front, but they aren't as close

together as they were on the original PS4. The placement of the hard drive has changed too, and it is now easier to replace the hard drive when compared to the process on the original PS4.

Coming to the PS4 Pro, the console will be available from November 10 in USA, and will be priced at \$399 (₹26,000 directly converted). The console will come with a 1TB HDD, and will let you play games in 4K HDR. Speaking of HDR, all currently existing PS4 consoles will be able to play HDR videos, via an update.

I have been asked a lot of questions about the console since it was announced, so I am going to do my best to answer them and explain this mid-console-cycle refresh to the best of my ability.

Two PS4 Slims = PS4 Pro?

Well, no. Sony says that the PS4 Pro can output four times the resolution with twice the power, and we will comment on this when we get our hands on the console. When it comes to the design of the PS4 Pro, it does look like two PS4 Slims stacked vertically.
