you're not the only one who's been so critical. We're getting it all fixed. Soon. Very soon. So stay tuned on that front.

Regarding laptops, you echo my thoughts. There's no reason why laptop screens continue to be 720p, when smartphones are packing in a lot more heat these days. Ditto RAM, speakers and other internal hardware.

But I'll tell you some of the balancing acts that a laptop has to keep in mind while it's being designed for production. Bigger screen size and resolution directly impacts battery life – would you buy a higher resolution

laptop which is thicker to carry around because of its screen? Laptop speakers are bad across the board because of physical restrictions – but you'll see thicker, heavier machines boasting off decent audio thanks to highly sensitive and precise audio chips and speakers. It's all possible, but at what cost? I'm not saying it's not doable, but the costs of these components aren't coming down and they won't anytime soon. You know why? PC sales are reducing worldwide, which means OEMs want to stick to their established revenue margins without promising extra which

would drive costs upwards, making their PCs even harder to sell.

✉ Hi guys,

I received the September issue about a week ago and I haven't read the entire magazine (pretty obvious).

There has been a sudden hype among my friends about the Dark or the Deep Web and hacking. Now this issue will most certainly help me in that subject. The God of War poster was great. I just finished watching Stranger Things and I loved it and you guys gave

LETTER OF THE MONTH

✉ Hey! I am a reader of the Digit magazine from quite few years, but I never sent a letter to you. This is my first one asking for some help.

1. Last month you reviewed the Canon EOS 1300D, so I was looking to buy a DSLR in the price range of 25k this Diwali. Is the 1300D the best or you prefer D3300 or D3200 or something else?
2. I just wanted to know if Raspberry Pi can run Remix OS or some Android OS. Because I was thinking of making my own smartphone following a guide. But I wanted an Android OS. So if there is any Android OS on Raspberry Pi please inform me.
3. Last week some people suggested for FIFA 17 poster and two DVDs, I want both of them. And I also suggest giving something related to technology instead of the Digit dmystify because I don't think more tech lovers are interested in them and they don't read it.
4. It would be awesome if you add a DIY column like that of tips and tricks.
5. I wanted to go in the field of ethical hacking after my 12th. I have taken CS for my 11th & 12th so basically what should I do after my 12th, what degrees or what courses to do for becoming a CEH. You people are doing a great work and keep it up :) Thank you and hope you look into my questions.

–Aksbansh

ferentiate the two cameras affect those who've already gotten a hang of photography. Since the D3300 is two years old, you might be able to get one for a much better price as well.

2. If you have a Raspberry Pi 3 then you can install Android on it. Even the recently released Android 7.0 Nougat can be installed. Follow the instructions shown in this video: <http://dgit.in/AndRasp>
3. Thanks for letting us know which poster you'd like with SKOAR!, user feedback matters quite a lot for when we decide which game to feature on the SKOAR! poster so keep writing in to let us know which game you are looking forward to. As for the two DVDs, well with better internet connectivity we've noticed that fewer people want more DVDs but then again, feedback helps us decide our direction.
4. We do have a DIY section every now and then, especially the special issues often feature the DIY section so that's something to look forward to.

5. There are quite a lot of courses out there for "Ethical Hacking" but few are considered to be valid enough to be considered a qualification for a job. You should start off by learning programming languages and familiarise yourself with Linux. Then install Kali Linux and get used all the penetration testing tools. Don't break any laws while doing so. Because familiarising yourself with the IT laws is another important aspect of becoming an ethical hacker. Often, applying for such jobs will require you to prove yourself at the interview so don't focus on getting a 'certificate' from any institute but get a good hold of the concepts and the more you practise, the better. As for websites to hunt information, please refer to the documentation of the individual tools. So if you want to learn about aircrack, check their website etc.

–Mithun

1. The D3300 is better than the 1300D given the higher ISO range and greater focus points. You might miss out on the built-in Wi-Fi but last we checked, both companies were packaging Eye-Fi cards along with their cameras that don't have built-in Wi-Fi. But if you are interested in learning photography then pick either, switch to manual and experiment as much as you can as the concepts are the same. The finer nuances that dif-
