Rest finger to open

Here's how you can get the 'rest finger on Touch ID' to unlock your Apple devices.
<http://dgit.in/iOpen10>

it a pretty good rating too. The iOS apps listed were also good.

Some of the other things I want to mention includes the fusion of SKOAR! with the main mag which was a good idea. Also, when are you going to start a YouTube channel for SKOAR? So we can watch you play games and give their first impressions etc.

–Aryaman

Great suggestions Aryaman. A SKOAR stream is in the works. We're just trying to figure out which platform to use. Stay tuned.

–Mithun

✉ Hello team Digit!

The cover story of August was really good, though what really caught my eye was the Quantum World dmystify. I enjoyed every bit of it, but I felt that the content you gathered on Quantum Physics didn't even begin to scratch the surface. Moving on to September, Sid's column was really thought-provoking, and I am eagerly looking forward to reading a sequel to this editorial. 'Hacker' cover story was interesting.

P.S. forgive the cheeky subject lines of my emails. I hate using these kind of tricks for catching attention, but four of my sent e-mails have never been read till now. With Regards to all Digitians behind every issue.

–Shivashankar.S.Menon

Young padawan, patience is a virtue. The masters have read your emails.

–Team Digit

✉ Hey guys, thanks for another interesting issue. I am Priyanshu studying in class 9, a science, tech and anime lover. Thanks to you guys, I am now using Ubuntu 16 and I really liked it a lot, you guys are like techno gods! Your previous month's dmystify about quantum world was great. Actually I was looking for something like that, but I expected more from it and something new but still it was better than the thick books since my exams are starting and it will be a boring week. I want to

become a theoretical physicist, so can I write some article in Digit, dmystify or online. Once again thanks and salute for your magazine.

–Priyanshu Pradban

It's nice to see young people these days have ambitions such as "I want to become a theoretical physicist". When we were growing up science wasn't "cool". Truly heartening.

–Team Digit

✉ Dear Team Digit!

I'm a 14 year old geek, who is writing his very first letter to the MOST AWESOME MAG IN THE UNIVERSE!

Your September issue was astounding, especially the cover story and the torrents (you know why...). Also, you guys really scared the hell out of me, as I was really petrified on not finding the separate mag, SKOAR!. Though it was a great idea of including the gaming mag in the main magazine.

Here are a few suggestions. Can you please review the new Intel Space Capsule? Please provide a poster of Battlefield 1 or Dishonored 2. And can you increase the content in the Dymistify booklet. Can you do a comparison between the PS4 Slim, PS4 Pro, Xbox One, Xbox One S?

Now time for some pros. Glad you improved the quality of tapes. Delighted to read the reviews on the mid-ranged graphics card (it's been a long time you see). Reading about the recent ESL India Premiership's Challenger Cup gave me a heart-warming feel. That's it for now guys.

–Sarang Dev

You're in luck Sarang since October already has a Battlefield 1 poster. Do let us know whether you liked it. We'll right away get on your suggestions and thank you for the wonderful feedback.

–Abhijit

✉ Hey! A big fan of you and Digit. Period. I was coincidentally working on an article this week. The idea had been in my mind since so long and AI consciousness still continues to fasci-

nate me. It was a real honour to have it read by you. I can't believe you took out time from your busy schedule and actually read that piece of mine. The best day ever for me indeed as I got an 'interesting read' from 'The Siddharth (Sir)'. Whenever Digit arrives, I grab it to check out your page and 'quirky yet deep' writing style. (It helps of course that it's the first one). You know it garners the readers' interest to read more about the theme of the month.

I was equally intrigued by what you wrote about "we all wait for certain consciousness indicators or signs but what if those networks indeed came alive and talked behind our back? I mean, just because it's beyond our human perception, does not mean that level of AI communication isn't there."

It gives me literally goosebumps to think about what all is about to come...

About the neural oscillations, the more on the hunt, the merrier. Please do let me know if you find anything even minute about it. I happened to stumble upon it while I was surfing through the topic of AI one day, and have been fascinated ever since. I am a B.Tech, Comp. Sc. & Engg. student (Sem 5) and I was writing this article for my college's Editorial Board, The Epicentre.

–Sampada

Oh come now Sampada you are much too kind. Of course I'll take out time to go through something a reader has taken so much efforts to write and send to us!

Things do get busy here at Digit but we're never THAT busy.

Your article was certainly an interesting read. Just one comment: it's one thing is to beat the Turing Test i.e. mimic consciousness. It is an entirely different ballgame to be truly self aware. Either ways, we're indeed at the cusp of amazing things to come. I'm intrigued by these 35-75 hertz neural oscillations you speak of. Will look it up. It's nice to see the editorial board of your college is so active.

Why don't you contribute some original content to Digit as well?

–Siddharth
