

Lenovo Yoga Book

The Lenovo Yoga Book comes with a large touch surface which doubles as a keyboard as well. It successfully marries a touchscreen tablet with a second touch-sensitive surface which can be used as a drawing or writing tablet, or as a "Halo Keyboard" which lights up when you need to type something. You can use your fingertips or a stylus and jot down notes with ease. The accompanying surface which you can write on supports 2048 pressure levels, which places the

Yoga Book in the same level as professional Wacom devices. Another neat feature was the ability to replace the stylus tip with an actual ballpoint pen tip and place paper on top of the writing surface and take notes. The Yoga Book automatically records it in digital text. At the \$500 (₹34,000) price tag for the android OS variant and \$550 (around ₹ for the Windows variant), it's not outrageously expensive as well.

Audeze iSine 10

Audeze are responsible for some of the best planar magnetic headphones in the world. Now they've gone and shrunk their technology to fit into an in-ear design. The Audeze iSine 10s are the first single-driver planar magnetic in-ear headphones ever made. The iSine 10's come with the conventional 3.5 mm headphone cables and Apple's Lightning

cable. It's also got a built-in DAC and amplifier. Don't let its looks fool you, while it may look like something aliens might wear, the Audeze iSine 10s guarantee deep bass, lush midrange and crystal clear treble; an overall high sound quality. And at the

\$400 (approx ₹ 27,000) price tag, it's making its entry at a very competitive price for audiophiles. Audeze were actually worried they might be underpricing the iSines. These could arguably be one of the best in-ears ever made, and Audeze definitely want to make that as clear as possible.

S6 Drone

Wingland's S6 pocket drone is a sleek piece of tech with a slim body which could fit in your pockets. It's got a 13MP camera with 3-axis Electronic Image Stabilization. It's about as big as your phone and weighs only 280g. It supports panning, slow motion, time-lapse, auto-following, and flight path setting among other things. Thanks to infrared detectors it can avoid obstacles from any direction, so you don't have to worry about the drone while it's in flight.

With a drone like this, you can actually record all your outdoorsy activities effortlessly and share them online. In fact, that's how the pros do it.

Philips 910F

Every year at IFA we see a new contender in the OLED TV market. First it was LG, then last year it was Panasonic. This year, Dutch electronics company Philips joined the fray with their 55-inch 910F 4k Ultra HD resolution, HDR, quad-core powered Android TV platform with a 6.1 Dolby speaker system. Yes we realise that's a mouthful to say. The 901F has a crisp display, with vibrant and well-saturated colors. The black levels are what you'd expect of an OLED TV, everything looks great. But the stand out feature in the 910F is the Philips Ambilight System it comes with. The 901F splashes light behind it to match the lighting/mood of what's happening on the TV screen to add an extra layer of immersion into your viewing experience.
