

## Lenovo Yoga 910

The Lenovo Yoga concept isn't a new one, it's been around for a good four years now. Despite this the Yoga 910 stands out as a noteworthy 2-in-1 because it does something most other 2-in-1's fail to do – actually bring innovations together and provide the user with a complete package. It comes with the watchband hinge, a design unique to Lenovo which provides support at whichever angle the hinge is at while at the same time keeping it slim. It's also nice to look at, so you're getting a good looking piece of tech as well. It's only 15 millimeters thick, which is thin for a 2-in-1 device. The Yoga 910 is not all show, you'll find a beast of a machine on the inside with an Intel Core i7-7500U, thin-bezel display, 4k resolution, a PCIe solid state drive, 2 USB-Type C's and a USB 3.0. It's a powerhouse you can carry around with you.

## Astell & Kern AK XB10

Astell & Kern's XB10s provide you with a new way to enjoy your audio wirelessly, like everything seems to be these days. The XB10 is a wireless DAC and amp which lets you use your headphones via bluetooth without sacrificing sound, so you're getting high-end sound wirelessly.

The XB10s use Qualcomm's Bluetooth codec to deliver 24-bit HD audio, so you should be getting that hi-fi audio quality. It supports both 3.5mm and 2.5mm headphones, voice calls thanks to a built-in microphone, and it works with both iOS and Android. Astell & Kern claim that the XB10s will last up to five hours on a single charge which is decent in our opinion. Furthermore, they'll come with a removable clip so that you can clip it onto or attach it to your clothes or bag. You can pre-order the XB10s on Astell & Kern's website for \$189.

## Yuneec Breeze

There's normally a lot of drones at IFA, and it was true this year as well. But there's always a drone or two that stand out among the plethora of UAVs. Enter Yuneec Breeze, a 4k drone for those moments when a selfie stick just isn't enough. Everything looks better from a bird's-eye view anyway right? One of the main points that stood out about the Yuneec Breeze was its price. At under \$500, which is still pretty pricey, it's a great deal for the features you're getting out of it. This drone comes with a range of automated flight modes, such as follow me, selfie, and orbit to name a few. Features like these are normally only found in drones far more expensive than this one, so if you're a casual photographer looking for a capable camera drone, the Yuneec Breeze is a great option for you.
