

DESIRE

TAKE MY MONEY!

Here is where we keep an eye on crowd-funded projects that will make you go 'Shut up and take my money!'

FORMcard

Fix the world around you

The FORMcard is a pocket sized card that's made of a strong, meltable, bioplastic. All you need to do is drop it in a cup of hot water to fix / modify the world around you. Since a FORMcard takes up about as much space as a regular visiting card or credit/debit card, you can always have one handy on yourself. After you drop a FORMcard into hot water, you can shape it into whatever you need depending on the situation. The FORMcard works instantly, so once it's cooled down it's ready for use. It sticks to plastic when hot, making it great for fixing broken plastic toys and tools, stuff you'd normally just throw away otherwise. The bioplastic used in FORMcards is starch based and totally non-toxic, colours included, so you needn't worry about your kids while they're playing around with them as well. FORMcards also come in a variety of colours because we can be a picky lot. Choices include colours such as camo green for the people who like to hide in plain sight, and fluo orange for the people who love being annoyingly loud. Just kidding, be as loud as you want. They're reusable, so don't worry if you get the shape wrong or need it for something else later. You can simply melt it down and shape it again!

Fidget Cube

Indulge in your fidgeting desires

We're sure you must've been told to "stop fidgeting!" at least once in the past, and about how it's unprofessional, and it's anti-intellectual behaviour, etc. But guess what? Turns out it's quite the opposite. There have been several scientific

studies that show how and why fidgeting is actually healthy behaviour. The Fidget Cube is a small cube, and each of its six sides has something on it you can fidget with. There's the Click side, for when you just want to fidget with buttons. A Glide side, with a mini analogue stick on it. A Flip side, with a switch on it for you turn

on and off to your heart's desire. There's a side called Breathe, designed like worry stones, to reduce stress when rubbed. A Roll side with rolling gears and ball. And lastly a Spin side, with a circular dial.

Coros LINX Helmet

The Coros LINX cycling helmet boasts being the world's first helmet with open-ear bone conduction. What this means is you can safely listen to music or any other audio without blocking out traffic sounds while wearing this helmet. No more distractions because of loud audio or earbuds falling out. Be completely aware of your surroundings and any hazards that might come your way while you're out cycling. The Coros LINX is a high performance cycling helmet which comes with its own smart remote and app. With the integrated RideAware open-ear bone conduction audio and microphone, you can connect the LINX helmet to a smartphone for music, calls, and voice navigation. Definitely something you would want to consider if you're the digital outdoorsy kind and like to keep your music close to yourself.
