

Picbot

The Picbot is a smartphone mount that helps you in your endeavour to capture the best moments with features like facial tracking, automated videos and pictures, timelapses, and panoramas. Camera hardware on smartphones has been steadily improving, and with the Picbot's help you can utilize the hardware to the max. You can create steady timelapses and thanks to

features like auto tracking and facial tracking you no longer need to be static while recording videos. There's no need for a camera controller, the Picbot is controlled by software when connected to its app on a smartphone. Picbot's motor is fully automated and is capable of rotating 360 degrees in either direction to create the perfect panoramas. If you're not happy with the automated controls

and settings, the Picbot comes with a bluetooth controller for when you might wanna take manual control. To add to that it's also got inbuilt features for editing and filtering, making it very difficult to pass up if you're an avid smartphone photographer.

Sgnl

Sgnl is smart strap that enables you to answer your phone calls through your fingertips. You read that right, your fingertips! All you need to do is place your fingertip to your ear and use that as if it were you phone. You speak into the embedded mic on the Sgnl strap and use your fingertip as the speaker. Simply replace your watch strap with the Sgnl strap and you're good to go. It doesn't matter if you use a classic watch, or a smartwatch, as long as it uses a strap, you can use Sgnl. With Sgnl you can eliminate the need for earphones, so there's no fear of losing them, and you don't even need to take your phone out of your pocket. Great isn't it? Furthermore your finger will only transmit sound from the audio source, so you don't even have to worry about background noises.
