

DESIRE

MOBILE WATCH

Stylish, glamorous and interesting smartphones are always on the horizon. We take a closer look at what's hot in this space...

Sony Xperia XZ

Sony's newest flagship phone – for the time being anyway – is the new Sony Xperia XZ. Sony may not be doing too well in the mobile phone market but their latest smartphone is actually looking to be pretty good. Apart from the Qualcomm Snapdragon 820 processor, it's got quite a few specs similar to its predecessor, the Xperia X, such as 3GB of RAM, and IP68 waterproofing. The rear camera on the XZ has two more sensors to support the main 23MP sensor – one for colour and one for depth. The front camera stays the same at 13MP. The XZ design is also seeing a few changes, it appears to be more squarish at the edges and has a new display feature called Loop which makes the screen appear as though it's wrapping into the edges. If you're a Sony mobile fan (we know a few), then it's a nice upgrade from your current Sony model.

iPhone 7

The iPhone is one of those devices people wait for the entire year and it's always on all the 'most awaited' lists. Apple has brought quite a few changes to the iPhone 7, some of which have been quite controversial. So let's not waste any time and get right to it. For starters, the iPhone 7 will come with a 12MP camera that comes with optical image stabilization and

a six element lens. The 7 Plus variant of the iPhone – which unlike some previous models, i.e. the 4 and 5, was announced alongside the iPhone 7 – has two 12MP cameras that will work in tandem, with the second camera having a 'telephoto' lens. The front camera is now a 7MP HD camera. Apple has gotten rid of the 3.5mm jack entirely, and it will instead come with a lightning connector and a 3.5mm jack adaptor. With improved battery life and better processing power, the iPhone 7 starts at \$649 for 32GB, and the iPhone 7 Plus, starts at \$769.

Turing Monolith Chaconne

Turing Industries are back and it looks like they've come up with a phone with even crazier specs than their already insane Turing Cadenza. The Turing Monolith Chaconne, as they're calling it, has some crazy specs on it – you might even say some "batshit insane" specs. TRI claim this a device that falls in the "phablet" category. The Monolith Chaconne will have three Snapdragon 830s, 18GB of RAM, a 6.4 inch 4k display and 768GB of internal storage along with 2 microSD slots. It will have a hydrogen fueled cell battery which gives it a boost of 20Wh to 120Wh. The Monolith Chaconne will use the Swordfish OS, have a 60MP rear-facing camera and a 20MP dual front-facing camera. It debuts in 2018.
