

GREED

EXAMINED

Some very cool products come to the Digit Test Centre which don't really fit into the standard product categories that we review in the Bazaar section. We write about them here mostly to make you turn green with envy.

G-Shock GBA 400

While not really a smartwatch, the GBA 400 holds true to G-shock's traditional ruggedness while focussing on one thing - music. Priced at around 9,500rs, this is not your average connected watch. What sets this watch apart is its music features, mainly its song detection feature. Once you've

set up the connection via bluetooth, long pressing the button on the left enables the search mode. In this mode, the watch listens to music playing around you and send it to the G-shock+ app, which works with the SoundHound API to search the title of the song and display it on the watch LCD screen. Pretty cool, eh?

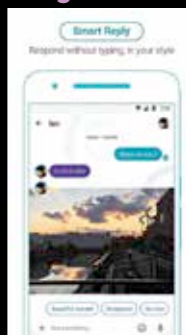

Apart from this, during connected music playback, the watch

lets you control the volume, the equalizer and the track being played. And that's about it, as you do not get any form of alerts and notifications on your watch, neither does the watch contain a basic activity tracker. According to Casio, this explains the watch's 2 year battery life.

Compared to a normal smartwatch, some of which would be available the price point of ₹10,000, the GBA 400 does come with a curtailed feature set, but what it does, it does really well. And for a certain set of people, the fact that it does not look like your typical smartwatch, might be its most unique feature! For the others, this one is essentially a one trick pony which will soon wear out its shine once you realise there are smartwatches slightly more expensive than this.

APP WATCH

Google Allo

Google Allo was announced at Google I/O 2016 and the internet just could not get enough of yet another chat application from Google (Talk, Hangouts, the list goes on). But after all that the app has finally come today with some very interesting features. And the best feature is the Google Assistant on the app, that lets you bring up search results, translations, restaurant results, movie schedules and anything you can get from Google services right within that chat window. There is also an option to enable end-to-end encryption for all chats.

MakeupPlus

Nobody needs to be told that image editing apps and features have become the craze recently. With filters and artistic alterations everywhere, MakeupPlus takes it one step higher by letting you do realistic makeup on any of your pictures. And when we say realistic, we don't mean blob-of-colour realistic. The app detects your lips, eyes, eyebrows, cheeks and other facial features and

produces a perfectly graded look for whatever cosmetic changes you are trying out. It also contains overall looks, some of them even based on popular characters and movies. Ever wondered what you would look like with blue eyes, green hair and higher cheekbones? Well, now you can find out!

Zaiuto

On-demand is the dream model for consumers. After food, cabs, rental furniture and more on demand, the next big segment going that way is car-repair with the Zaiuto app. If and when your car breaks down, you can fire up the app and hit 'Get Help' on the main screen, below which you can see the estimated arrival time of the mechanic from the nearest partner workshop. After selecting

your problem, payment method and a few more details, a mechanic would soon be on his way to your location. Compared to the entire hassle of having your vehicle towed, or fetching a mechanic yourself, this one's surely a friend in need!
