

HTC Bolt images leaked

HTC Bolt, the smartphone HTC has been working on has its image renders leaked online. <http://digit.in/HTCBltImg>

Microsoft blocking Linux

Microsoft may be preventing laptops from installing any other OS other than the default Windows 10 OS that ships with the laptop. <http://digit.in/LinuxInstl>

G.SKILL Ripjaws KM780 RGB

The most featured-packed gaming keyboard we've ever seen

Price
₹14,770

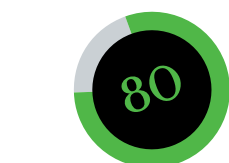

The KM780 RGB has a long checklist of features to its name. The pipe that surrounds your keyboard is not only an aesthetic feature but it also houses the keycap box, mouse cable holder and the wrist rest. The wrist rest is big so you can rest your palms comfortably.

The passthrough USB port is a great addition to mechanical keyboards at this price range, in fact it

is expected to have one. You'll also find audio ports to its side and a rollover switch to shift between six key and N-key rollover. On the top right corner of the keyboard, the LED volume indicator and volume can be controlled using the partly knurled volume dial. Almost everyone is doing extra keycaps but here the WASD keys have an unpleasant height and slope. On the far left of the keyboard, you'll find the extra section of macro buttons and mode selection keys. One of each mode selection key is capable of storing profiles, so they can show off different colour and lightening effects, and macro functions.

The software is pretty easy to use. It's simpler than the Corsair Utility Engine but not as granular, as it should be. The lighting scheme is not applicable across the entire board as the multimedia keys are left out. All the features on this keyboard makes it the most feature rich gaming keyboard ever to grace our test labs.

Freedom 251

A fallacy full of fallacies

The Freedom 251 looks, feels and performs like a five-year-old phone, but that's expected. At ₹251, one tends to overlook any flaw a phone may have. What couldn't be overlooked is how poor this phone is.

The phone looks and feels good for its price, but open the back, and you find a battery falling out. Why does it fall out? Because it doesn't fit the slot on the phone. This leads us to believe that the battery isn't meant for this phone any way. Given the recent battery issues with Samsung's Note 7, would you really trust this device, even for ₹251? We surely wouldn't. No way.

Benchmarking the device gets you results that are representative of a device in the ₹5k phone price band. It has a 1.3-GHz MediaTek MT6580 SoC. However, the storage is only 4GB, as opposed to the promised 8GB. It has a 2MP rear camera, against the promised 3.2MP.

A maximum brightness reading of 396 Lux is beyond question at 251 bucks, but be aware that you won't get the promised qHD display either. This one has a resolution of 480x800 pixels, which is WVGA resolution.

Our basic bone of contention with the Freedom 251 is that even at ₹251, it's not what the company promised. We don't find the device trustworthy, even for a first time buyer. The basic and first time smartphone user deserves better, and should spend on a sub5K phone instead of this.
