In terms of looks, the M1s are quite unassuming. In fact they border on cheap-looking. The only thing that indicates to the contrary is the quality of the cable. The cable and the flexible joint seem very sturdy, which is good.

The housing is fairly compact, made of plastic and is extremely lightweight. Listening for hours on end won't be an issue at all. As is standard with most Brainwavz products, you get six sets of silicone eartips in small, medium and large sizes plus the complimentary Comply foam pair (which I never use). There is also the standard hardcase.

The sound output delivered by the M1 is not bad at all. The soundstage is quite wide, and the signature is close to neutral. I found the mids well represented with vocals sounding upfront and natural. I would've liked the bass to be

tighter. Genres like house or EDM will leave you slightly disappointed with the flat low end. Yep, a little more bass would've been appreciated. For a long time the SoundMAGIC E10S was my go-to recommendation for the ₹3k price point. It recently got knocked out of that spot by the MEEaudio M6 Pro with its superior aural performance and features such as detachable earpieces, replaceable cables etc. Can the Brainwavz M1 displace the M6 Pro? Not quite. To be sure, the Brainwavz M1 do sound really good. They're just as good or slightly better than the SoundMAGIC E10S but not better than the MEEaudio M6 PRO. However, the M6 Pro isn't easy to acquire (especially at the 3k price point). So if you're in the market for a better-than-budget pair of in-ears, the Brainwavz might just win your heart.

MSI GE62VR 6RF Apache Pro

Our new 'best performing gaming laptop'

Everything we loved about the MSI GE62 6QD is back. The laptop continues to have the previously seen brushed aluminium finish on the top with the backlit MSI logo and the exact same chassis as its predecessor. Weighing about two and a half kilograms, this gaming beast is one of the lightest gaming rigs we've used.

The MSI GE62 VR test unit was equipped with an Full HD display but MSI does offer you an option to upgrade to a 4K display. The membrane based SteelSeries keyboard is pretty solid and offers about 2mm travel with a tactile feedback. MSI also bundles in the SteelSeries Engine 3.

The trackpad included is identical to the one we saw on the MSI GE62

6QD with the same brushed aluminum finish.

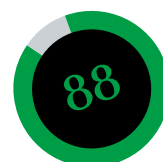

The Core i7 6700 HQ combined with a SSD storage and the GTX 1060 offer superior performance. PCMark 8 Creative Accelerated scored 5162 and 3DMark Fire Strike returned a score of 9643. The improvements that the Pascal architecture brings in with the 1060 is pretty evident with the scores that are improved majorly over the GTX 980M.

If you are looking for a light, lean laptop and don't mind carrying around that adapter, look no further. MSI GE62 VR 6RF Apache Pro not only is light to carry around, but also light on your pocket as it offers the best bang for your buck.
