Self-driving Uber

Uber's self-driving fleet aren't in India yet, but here's how it feels to ride in one. <http://dgit.in/UbrSDC>

Mid-tower Glory

HIGH-END MID TOWER CABINETS BRING THEIR BEST TO THE BATTLEFIELD IN THIS MONTH'S COMPARISON TEST

Abhijit Dey
abhijit@dgit.in

While building your own PC, it's a really smart move to spend some time researching on the components you buy based on your preferences. Speaking of cabinets, a lot of factors should be considered before you make a purchase and several of these factors

are often overlooked. Cabinets have slowly evolved to give the user more flexibility to accommodate and upgrade. Earlier we used to find all the sections inside the cabinet riveted with poor cable management, whereas nowadays the level of modularity has gone so far, that you can completely open them apart to its barebones. Whether you're planning to build a basic gaming rig, or are you plan-

ning to go completely crazy with liquid cooling systems, it's essential that you spend your money right. Although Agent 001 keeps getting most of the requests for budget gaming cabinets, we set out to find the best offering in the high-end mid-tower category. Hence, there was no bar on the price and we procured one mid-tower cabinet from each manufacturer including Antec, Cooler Master, Corsair,

NZXT and Thermaltake. We witness these cabinets battling against each other for mid-tower glory.

Note: To understand the testing criteria, we advise you to jump to the How We Tested box before continuing for more clarity.

ANTEC GX900

The cheapest one in the comparison test, the GX900 features a military-themed
