BATTLE OF THE MARKET BREAKERS

Brands like Xiaomi, LeEco, ASUS and OnePlus thrive on disrupting the market. However, it's becoming increasingly difficult to choose between their devices. Here's some help.

By Prasad Banerjee

A good smartphone is that which can suit its user's needs to the fullest. Buyers often want a good camera and they're willing to compromise performance for the same, while some want a good looking phone over anything else. While most often, the best performer is one that fits all these criteria, things can be different. That's just the case with four of the most popular smartphones today: the

ASUS Zenfone 3, OnePlus 3, Xiaomi Mi 5 and the LeEco Le Max 2.

Brands like Xiaomi, OnePlus, ASUS and LeEco thrive on disrupting the market to sell their smartphones. They have been challenging established brands by following such strategies and have established themselves. They have made disruption the norm and made the competition amongst themselves very difficult.

As a result, a buyer choosing from phones between these brands finds it very difficult to choose the right device. Take the above mentioned

phones for example. If you're trying to choose amongst these devices, you'll have a tough time deciding which one to go for. In this comparison, we aim to determine what the best phone is for those who want a good camera, or perhaps the best battery, and of course, performance.

Unlike our regular comparisons, where we pick the best performer and best buy, today we try to determine what a particular kind of buyer should buy. The festive season of deals being right upon us, this one's you to make the best choice for your next phone.
