OUR PICK OF THE BEST TECH ARTICLES FROM AROUND THE GLOBE

(MUST READS)

NOT A TECH LAGGARD

Apple, on the iPhone 7 launch says that the company may be stronger than ever with its expansion in several fields such as wearables and apps, even though the recent reports suggest the opposite.

DRIVING, A THING OF THE PAST

Automobile manufacturers claim that the evolving technologies are quite capable of taking 'driverless cars' further than just providing assistance to the driver and take full control of the car, ending the current form of transportation.

SIGHTSOUND VERSUS APPLE

The intellectual property can be hard to protect as well as defend. Here is SightSound's story of a war that they fought against Apple Inc that started back in 1988. Quite an interesting one.

The next 'Big' thing

Smartphones have been the biggest thing that the tech evolution has seen. 2-in-1's were designed to push laptop users to shift to convertibles but the giants could not really succeed in popularising them with the masses. Here's their plan B.

State of Music Streaming

Music streaming boom has set some trends with on-demand music and ad-supported models continuing to dominate. Even after being forced to choose the alternative, the masses choose to disagree, and that does say something about the music streaming market.

Inexhaustible cloud power

Being connected to the cloud has become mainstream and several apps and services are empowering us with cloud computing for day-to-day activities. All of this is possible due to enterprise cloud computing market, that seems to be struggling to keep providing services.
