Apple iOS 10: The good, the bad and the ugly

Let's find out what iOS 10 has to offer and what we most like and dislike about Apple's nouveau operating system.

– By Adamya Sharma

Apple has finally rolled out the official version of their "biggest iOS release ever" - iOS 10. After a rough beginning, where the new OS was found bricking a small number of devices, Apple upgraded the software further and released iOS 10.0.1, which is probably what you got when you installed the new OS.

Yes, a lot has changed in iOS 10, some of which is pretty good, some bad, and some that's outright ugly! Let's find out what iOS 10 has to offer and what we most like and dislike about Apple's nouveau operating system.

Lock Screen

The Good: iOS 10 has a new, more interactive lock screen which incorporates new gestures. Users will be able to swipe right in order to access their lock-screen widgets. Users can also reply to their notifications straight from the lock screen, without having to unlock the phone and access a particular app. So, if you get a WhatsApp message, you can 3D touch it to reply without actually opening the app.

The Bad: If you don't own an iPhone 6s, 6s Plus or Apple's latest flagship iPhone 7, then forget about replying to those WhatsApp messages from the lock screen. Yes, you need 3D Touch to be able to interact with notifications on your lock

screen. Don't worry, the new swipe-right gesture will work on your iPhone 5s, iPhone 6 and iPhone 6 plus. But, if you want to take complete advantage of iOS 10, it's time to upgrade (you'll know why in due course). In addition, iOS 10 adds the 'Raise to Wake' feature through which the phone screen simply wakes up when the user lifts the device, the same though is not available on devices below the iPhone 6s.

The Ugly: One of the first, most annoying thing you will notice about iOS 10 is "Press Home to open" default setting. Yes, you can change the setting from the Accessibility settings, but keeping this a default shows Apple may want you to get used to doing this in future iPhones. Most of us loyal Apple users

hate the feature. It felt so slick when the iPhone unlocked with a simple, gentle touch of the home button. The added press of the home button may be a plus for Android users looking to move to iOS, but it's hard to believe ardent Apple users will like it very much.

Notifications & Widgets

The Good: iOS 10 brings with it a redesigned way of displaying notifications. Although the gesture of swiping down from the top remains the same, notifications are no longer clubbed by apps is great. You don't have to dismiss notifications from each app category anymore and a single tap on the top right corner can clear all recent notifications.
