Q&A

Q A dead iPod Shuffle

Hi, I have been using an iPod Shuffle for a while, it had worked perfectly till now. I'm facing a problem in turning it on, it's not responding on anything. It's not charging or showing any light notification. I faced the same problem a month ago, but iPod recovered and started working (I don't know how). My PC is also not detecting it (I already tried updating iTunes, but it's not helping). Please help me from this.

—Jayant

A Hey Jayant, the iPod Shuffle is quite an old device and we believe that it has reached its end of life. Someone from our team also faced the same issue where his Shuffle wouldn't charge, get detected or even play any songs. Either the USB port has been damaged or the entire device has gone dead. If you really want to use the device, you could take it to your nearest Apple store for service and repair, if they are still selling that particular unit.

Q Overheating mess

I bought this Lenovo laptop back in 2011 from Bahrain. It used to work very well. But from the last one and a half month, I'm having trouble with my laptop. When I turn on my laptop, it works properly but when I try to play games like FIFA or GTA, there is a sudden cutoff of power in laptop. I cleaned my laptop's fan and applied thermal paste on heat sink, hoping to resolve the problem. But now, it's not even working for 15-20 minutes while doing normal activities on my laptop. My laptop becomes extremely hot in 5-10 minutes and becomes dead. Also, some USB ports and the fingerprint scanner is not working. What should I do? Kindly, help me to figure out this problem ASAP.

—Abhishek

A Hey Abhishek, the laptop switching off automatically while running games

is a sign of CPU or GPU heat-up. Usually, CPUs have a threshold in temperature levels, after which it shuts off. Cleaning the fans and reapplying the thermal paste is the correct approach but if it has worsened the problem then probably you might have done a mistake somewhere in between. The problem could also be in the GPU chip. Another possibility could be few areas in the motherboard PCB witnessing short circuits which automatically cuts off the main power. If the problem isn't solved by cleaning your laptop, then you will need to take it to a servicing centre to have your motherboard circuitry checked.

Q The SD switch

Hi guys, I need your help! I have a 16 GB Samsung Evo SD card and it has been troubling me for a while. I have about 2 GB space unoccupied but data cannot be copied on it and neither can I delete its previous data. I tried to format the card but my PC gives me an error that it cannot format the card. I even tried to delete the data manually but then the data does delete and if I replug the card the data restores itself (amazing right, not at all!!) Is there something else that I should try or the SD card is done, kindly help? Thanking you in advance.

—Aryaman

The write lock is often overlooked

A Hi Aryaman, the problems that you've mentioned seem more likely that the time has come to buy a new SD card unless you have a warranty. But there are a few things you need to verify before getting disheartened. Few SD cards have a

write mechanism which can be locked and unlocked through a switch on the card. If you see a switch, turn to the other direction and check whether you're able to delete the files manually. The other options point to towards the fact that the card has completed the maximum write cycles possible, and has gone into a read-only state. **T**

Element of Success

Add a little attitude to all your presentations with iBall's 2.4GHz Wireless Presenter. Probably the most powerful presentation tool an executive will ever hold!

- 2.4GHz Wireless Trackball presenter device
- 6 Button with built-in laser pointer
- USB Micro receiver
- Use as mouse with Trackball & Left click button
- Left & Right button for previous or next slide
- On/Off switch to save battery life
