

Hackers

Watched too much of Mr. Robot and fancy yourself a hacker? Here is a Clash of Clans clone which offers you a chance to be just that. Hackers is a visually stunning game about building a secure network, hacking other players' networks and helping your country win a global cyber war. The game doesn't have actual coding and is mainly about strategy and resource management.

The game is fully 3D and you can rotate the camera angles to admire your spiderweb-like network from any perspective. The nodes are mobile

around the gameboard, allowing for ease of connection. Each aspect of the game is beautifully designed, from the scene transitions to how the game functions, you need to build a base which connects to the internet and allows you to attack others (or be attacked). When you attack the other players, you simply create malicious bits of software with one tap and send those to take over the network. If you succeed you get points and resources. One aspect of the game that is not refined yet is the matching algorithm and you might frequently get matched with players far above your skill level. Even if you beat them, you receive

lesser points than when they beat you which is a bit unfair. However, this should be solved in the near future as more people join the game. Unfortunately, it has quite a few in-app purchases which is a tactic employed by most mobile game developers in order to earn from games that are free to install. Despite that, Hackers is a refreshing change from the usual.

Burnout City

Burnout City is not related to the Burnout game for PC but instead is heavily inspired by the hugely popular Pako, a game about dodging ever-increasing police forces. In this game, your vehicles range from a bathtub and an ice cream truck to a ghost ship and a trojan horse. You control these 'vehicles' as they travel at a fixed speed in a city landscape. Tap the left side to move left and the right to move, you guessed it, right. Touching both sides puts the car in reverse. As your 'Wanted' rating rises, depicted by five stars at the top of the screen, more advanced police vehicles come after you. You'll even find increasing

police barriers in your way. However, if you are driving one of the more robust vehicles, you can easily toss these aside. And yes, there is an added goal of deliveries in each level.

The polygonal design of the game makes it a delight to play and the game is sprinkled with characters with unique missions which will help you level up. One thing that might

irk you is how expensive the in-game purchases are. Each car is for ₹200 which hardly seems worthwhile, especially when compared to the cost of additional characters or vehicles in similar games (around ₹50 -60). The main menu is cluttered with different bundles and the game does a good job of shoving these in your face. However, the game is perfectly enjoyable without these extras.

Vertigo Racing

Vertigo Racing is a slot-racing game with a distinctively vintage feel. It is a game with just two controls, a button for the gas and one to brake. Each level is divided into stretches of roads where the checkpoints are gas stations. Your goal is to expertly handle the gas and brake to ensure that you don't fall off the track

and also that you reach the checkpoint before you run out of fuel. The concept is nothing new but the execution will take your breath away (or not, in case you are not easily overwhelmed). The game looks gorgeous and reminds one of old photographs with the vignette around the screen. The soundtrack is groovy and speaks of a time when long car rides along scenic routes were savoured as opposed to the constant rush of today.

There are ten classic automobiles that you can play with, ranging from the Piccola to the Prestige. You can even customize the cars, right from the interiors to the outer paint job. The tracks are intricately designed and twist and curve enough to provide you

with a fairly challenging game. You can drive your car over spooky hillsides, alpine tracks or lazy, flowered avenues. One problem with the game is that ads pop up often and this detracts from the pure fun of the game. Also, the difficulty curve is pretty steep and after a certain point it becomes difficult to advance any further without spending some money on the game. Another problem is that the mechanics can be a bit messy at times and the car will spin out of control even though you did everything you could to keep it on the track. However, despite the few flaws, the game is a polished, stimulating game which will not leave you bored. Try this if you like a challenge and don't mind putting in some hard work to win.
