

Sound

Sound by Human Incorporated is a very unique headphone or rather, as they call it, more than a headphone. The first thing that stands out about the Sound is its shape, it's made to resemble the shape of your ears. Because of its unique shape and size, the Sound comes with hardware you won't find on any other earbuds. Sound features capacitive touch control which makes use of the device's exteriors. Simple motions on its surface will allow you to control things like the volume, pause/play, accept/deny calls, etc. In the software department, Sound comes with six different modes: Social, which lets you share audio in real time. Fade, which uses an ambient noise system to block out external noises. Amplify, where you can turn the Sound into a loudspeaker by simply bringing both earphones together. Speak, which can actively translate language as you speak. Active, which monitors your health and physical activities and lastly Sleep uses special rhythms and tracks to induce sleep, and wake you up when you need. In addition to all this, the Sound promises 12+ hours of battery life. Sound is expected to ship out in July next year at the \$400 price tag.

Podo

The Podo is a tiny Bluetooth camera which you can stick on to pretty much any solid flat surface. No need for hands, selfie sticks, or pesky mounts! It's got a micro-adhesive sticky pad at the back which is reusable and washes with water. Through the Podo app, you get live video feed directly on your phone where you can set timers, capture timelapses etc. Everything gets transferred directly to your phone. The Podo comes with a wide-angle 5 MP sensor and you can sync up to 6 Podos to one phone. The Podo weighs 43 grams, comes with an LED indicator ring, 8 GB of memory and Bluetooth 4.2. This neat camera is expected to retail at just \$79, but you can grab a limited early bird unit for just \$39 on kickstarter.

DJI Mavic Pro

The DJI Mavic Pro is a rather small drone, but don't let its size fool you. The DJI Mavic Pro boasts having the most sophisticated of DJI's flying cameras, with a whopping 24 computing cores, a transmission system with 7km range, four visual sensors, and a 4k camera which is stabilised by a 3-axis mechanical gimbal. With DJI's new OcuSync transmission technology, the Mavic can stream in Full HD at a range of 7km, if there's no interference. The Mavic uses FlightAutonomy to see obstacles and objects as far as 15m in front of it so that it can avoid them. The Mavic comes with several modes, such as ActiveTrack where you only need to tell the Mavic who or what to track, and let the Mavic do its thing. Other modes include Trace, Profile, and Spotlight. The Mavic also has a Gesture Mode wherein you only need to gesture at it to take a photo. Vision positioning on the Mavic comes with GPS and GLONASS to ensure precise positioning. You can get your hands on this drone for \$999.

SMOVE

Now before you go all "bleh! another phone mount?" hear us out. The SMOVE is a smartphone stabiliser, but it also doubles as a powerbank. So, you can use it to charge your phone while you capture photos and record videos. It's not very large or bulky, so you can carry it around in your pocket or a bag. It also has an Automated Panorama feature, with which you can take panoramic shots in 180 or 360 degrees in vertical or horizontal orientation. Another feature on the SMOVE is Auto Face Follow, which recognises and tracks faces. The SMOVE comes with a working voltage of 3.2-5V and a power bank capacity of 5,200 mAh. The charging input interface uses a microUSB port while for output you have a standard USB and miniUSB port. You can use the miniUSB to charge while operating the SMOVE. It has Bluetooth 4.0 built-in and supports both iOS and Android.
