

MATE eBike

The MATE eBike is a foldable electric bike. It has a 3-step folding system, so you can carry it along with you on a bus or train, or in your car's trunk for road trips. The folding also means it's easy to store indoors and won't take up too much space. While you can ride the MATE around as a normal 7-gear bike (if you can call 7-gear normal), MATE also has an electric hub motor which lets you ride at up to 35 kmph without breaking a sweat. The MATE also promises a range of up to 80 km on a single charge! To add to that, you can actually use the MATE to charge other devices, as it includes a 5v USB charger at the front. The MATE comes with both front and rear suspension, a set of two carbon disc brakes, and a Samsung Li-ion battery which is hidden away in the frame under a lock mechanism. It's easy to remove the battery and charge, or you could simply plug the bike directly to a power outlet. The MATE also comes with a computer which has a waterproof and dustproof LCD backlit display. This display shows you details such as the battery life and distance travelled.

goTenna Mesh

With the goTenna Mesh, you can communicate without Wi-Fi, cell networks, or satellites, using your existing smartphone. It's the first 100 percent off-grid, long range mesh network. The goTenna Mesh device pairs with your smartphone via Bluetooth and allows you to communicate without any service. So if you don't have any routers, or live out of tower range, no worries, at least the goTenna will still work. With the goTenna you can send text messages and share GPS location with others on offline maps. You can chat privately or even have group conversations, broadcasting to any other goTenna Mesh device which could be up to several kilometers away. These tiny devices make use of networking protocols which intelligently lets you relay messages through other users. It also does this privately. The more number of people in

a network, the stronger and larger the device's effective range! This makes it a useful device when your network and Wi-Fi is down or unreliable. After you've paired with the goTenna, you can chat using the goTenna app, which has a range of 4.8 km in open terrain, and 1.6 km otherwise. Remember, the range can increase with more devices in the network. Definitely a handy device to have around.

Garmin Vivofit 3

The Garmin Vivofit 3 is a daily activity tracker which automatically recognises and monitors periods of sustained activity like walking, running, biking, and swimming. It's designed for daily and regular wear, with a battery life of one year and water resistance up to 50 meters. Stats are automatically synced to Garmin Connect, an online fitness community which enables users to analyse their data and activities in a convenient timeline format. Users can then set health and fitness goals for themselves based on the analysis, and the band will alert the user whenever a milestone has been reached. Expert advice and tips are also available. Through Garmin Connect you can even challenge and compete against others in the community and earn virtual badges. The Vivofit 3 display shows steps, calories, distance, time, etc. It has an audible alert when you've been inactive for long durations of time. You can get it for ₹6990/-.
