

TAKE MY MONEY!

A hand holding a black pen is writing mathematical formulas on a tablet. The formulas include:
$$U_{\text{max}} = 7.74$$
$$E = \frac{F}{f}$$
$$E = \frac{W}{dK}$$
$$\delta E_{\text{th}} = \frac{\partial}{\partial}$$
$$C = a$$

Lynktec Flip Smart Stylus

At a glance the Flip looks like any other stylus, but with Flip you don't have to worry about charging your stylus or even connecting it to your tablet via Bluetooth. The Flip gives you the features of an active stylus without having to go through the complications that come with one. It knows what you want it to do and it's easy to use. Messed up while drawing or scribbling? No worries, just flip it over and it's now an eraser. The Flip is powerful enough to be used professionally by digital artists, and it comes with interchangeable tips so you can draw, sketch, and paint to your heart's desire. Some of the tips included are the TruGlide Mesh tip, the Artist Brush tip and the Precision Cross tip. The Flip comes with palm rejection as well, so you can rest your palm on the screen of your tablet without worrying. Flip knows the exact location of the stylus on the screen and can reject anything else that may be touching the screen. The Flip has a hover and zoom feature, allowing you to add more detail. The Flip also comes with a free app called Flip Notes for drawing and note taking. If you want of your own, you can still back Flip (haha) on Kickstarter and get one.

BIG-i

The BIG-i learns and improves itself, becoming more intelligent with instructions. The BIG-i has face recognition, 3D vision, smart home integration, light intensity detection, video calling, voice programming, sound localization, face recognition and motion tracking among other things, there's a lot packed into this robot. You can get yourself a BIG-i from their Kickstarter page by pledging \$749 or more. It's expected to ship by April next year.

MagBolt

The MagBolt is a 2-in-1 magnetic connector that works for both Android and iPhone devices. Thanks to its connectors you can quickly and seamlessly charge your devices with magnetic coupling. One of the MagBolt's variants comes with full support for the new iPhone 7, which means support for both audio and power through the same connector. It's easy to connect and supports fast charge as well, so you can use 2A max current throughput for your devices. The magnet contains rare earth magnets, so the connection is secure. With the MagBolt you can synchronise and transfer your data and files while simultaneously charging your phone, and it's also dust and water resistant. The MagBolt is unobtrusive and small, it won't snag or get caught anywhere and works with almost every phone case. Shipping starts in December.
